

The background features a blue wireframe globe. In the center, there is a network port with a network cable connector plugged into it. The connector is a standard RJ45 type with four colored wires (green, orange, blue, brown) visible. The globe is rendered with a grid of lines, and the overall scene is lit with a blue glow.

# CHIL

CSS HTML Integrated Language

Gil Chen--Zion - gc2466

Ami Kumar - ak3284

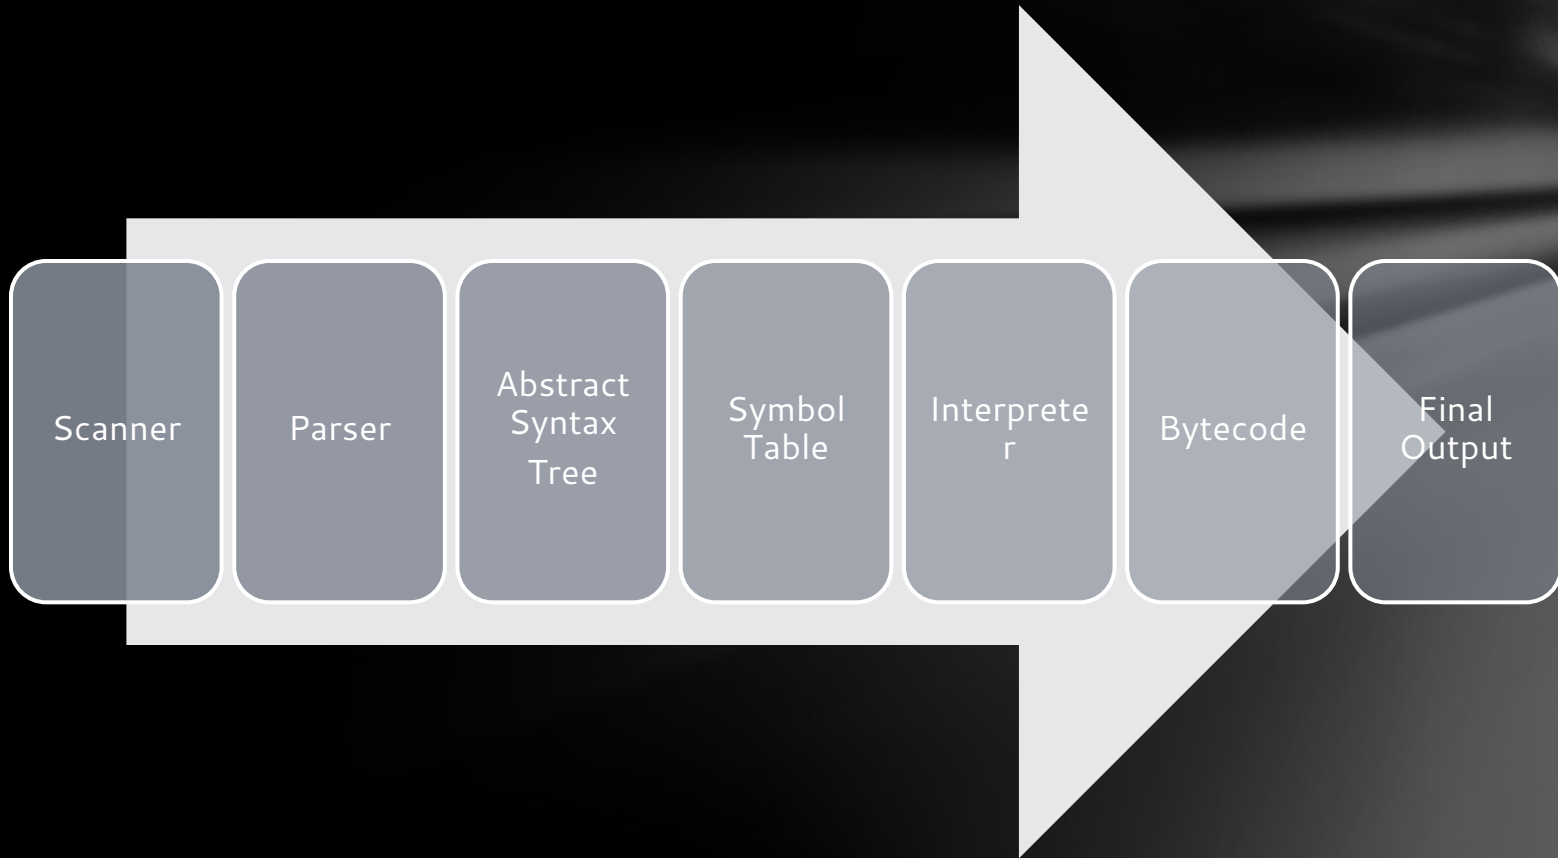

Annania Melaku - amm2324

Isaac White - iaw2105

# Overview

- ❑ An Abstracted Mark-Up Language
- ❑ Bridges the gap between HTML and CSS
- ❑ Additional features
  - ❑ Looping
  - ❑ Simultaneous declarations
    - ❑ Structures & Styling
  - ❑ Complex elements

# Language Structure

# Details

- ❑ Static Scoping
- ❑ Strongly typed
- ❑ Global & Local Variable Declaration
- ❑ Features are self-scoping
- ❑ Sequential Ordered Analysis

# Sample Code

*functions.ch*

```
fn testFunc(string param)
  el someElement = {
    contents: param
  }
  rtn someElement
endfn
```

```
el x = testFunc("element 1")
el y = testFunc("element 2")
el z = testFunc("element 3")
```

```
Page.add(x)
```

```
Page.add(y)
```

```
Page.add(z)
```

```
int totalValue = 20 + 22
```

```
el theAnswer = {
```

```
  contents: totalValue,
```

```
  style: ${
```

```
    css: "font-weight: bold; font-family:  
    arial; font-size: 2rem; color: white;  
    background-color: black; display: block; box-  
    sizing: border-box; padding: .5rem; border: 1px  
    dotted white; margin: 1rem;"
```

```
  }
```

```
}
```

```
Page.add(theAnswer)
```

*arth1.ch*

# Lessons Learned

- ❑ Scheduling & Time Management
- ❑ Laying out the Language
- ❑ Ocaml
- ❑ Goals & Deadlines
- ❑ Testing & Debugging

# What We Did

- Syntax Changes
  - `\n`
  - `fn - endfn`
  - `while - endwhile`
  - `if - else - endif`
  - styling and naming
- Added Binary Operations
  - `*=, /=, ++, --`
  - `squared ( ^ ^ )`
  - `factorial ( ! )`
  - `power ( ~ )`
- Refactor Test cases and Makefile

# Sample Code

## EXAMPLE 2: FIB

```
fn fib(x)
  if (x < 2)
    return 1
  endif
  return fib(x-1) + fib(x-2)
endfn
```

```
fn build()
  print(fib(0))
  print(fib(1))
  print(fib(2))
  print(fib(3))
  print(fib(4))
  print(fib(5))
endfn
```

## EXAMPLE 1

```
fn build()
  int b
  b += 10
  print(b)
  b -= 2
  print(b)
  b /= 4
  print(b)
  b *= 2
  print(b)
  b = b ^^
  print(b)
  b -= 14
  print(b)
  b = b ~ 3
  print(b)
  b = 3!
  print(b)
endfn
```
