# Exploring Image, Video and Multimedia in Large Data Applications

Prof. Shih-Fu Chang

<http://www.ee.columbia.edu/dvmm>

January 29<sup>th</sup>, 2016

# First Digital Camera in 1975

- film-less photography

by Steve Sassan of Kodak

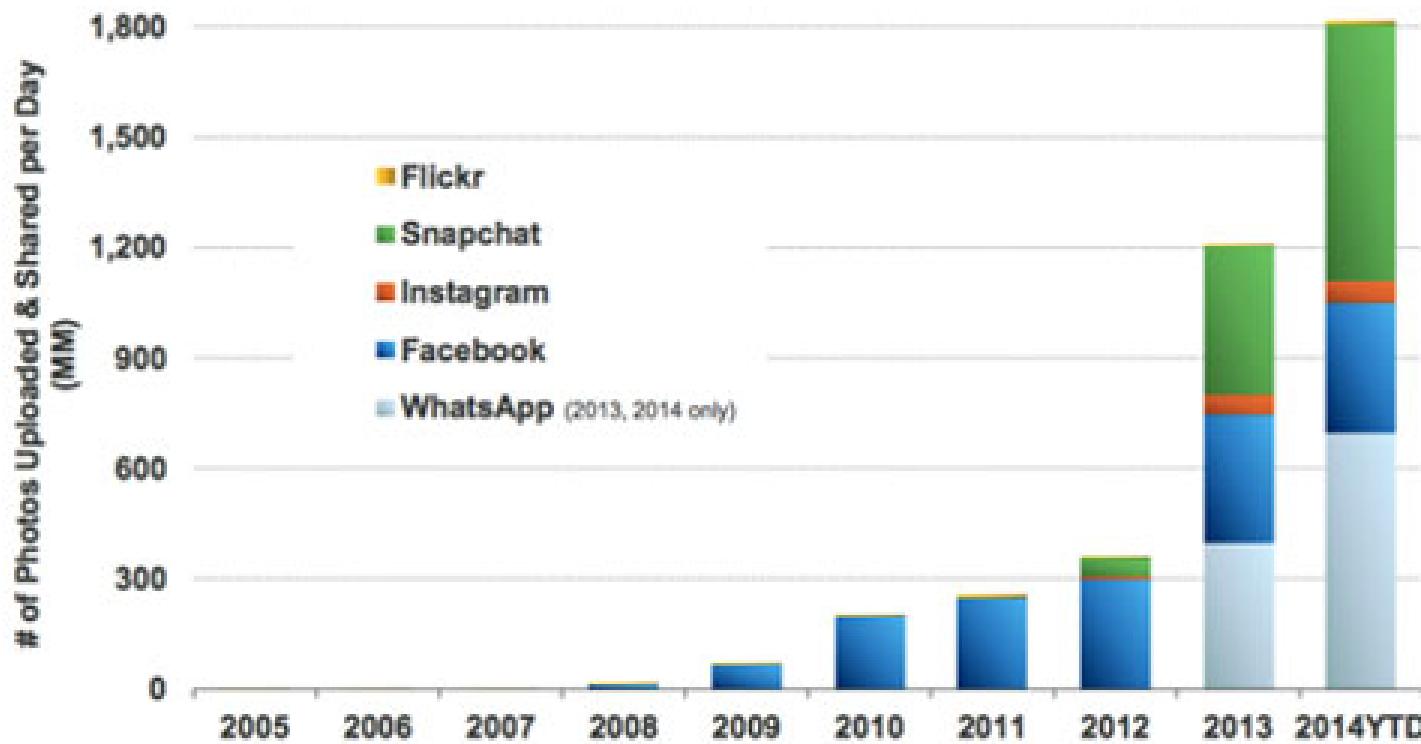

- CCD array, A/D converter, 16 batteries
- 23 seconds to record a photo to cassette
- customized reader on a B/W TV for viewing

Q: quality, size, cost, store, share?

# Today ...

Photos Alone = 1.8B+ Uploaded & Shared Per Day...  
Growth Remains Robust as New Real-Time Platforms Emerge

Daily Number of Photos Uploaded & Shared on Select Platforms,  
2005 – 2014YTD

Source: KPCB estimates based on publicly disclosed company data, 2014 YTD data per latest as of 5/14

## ImageNet Large Scale Visual Recognition Challenges

ImageNet:  
Recognize > 1,000  
object categories

### Variety of object classes in ILSVRC

	DET	CLS-LOC					
birds		flamingo	cock	ruffed grouse	quail	partridge	...
bottles		pill bottle	beer bottle	wine bottle	water bottle	pop bottle	...
cars		race car	wagon	minivan	jeep	cab 6	...

# Rapid Progress in Recent Years:

Classification/  
Detection Task

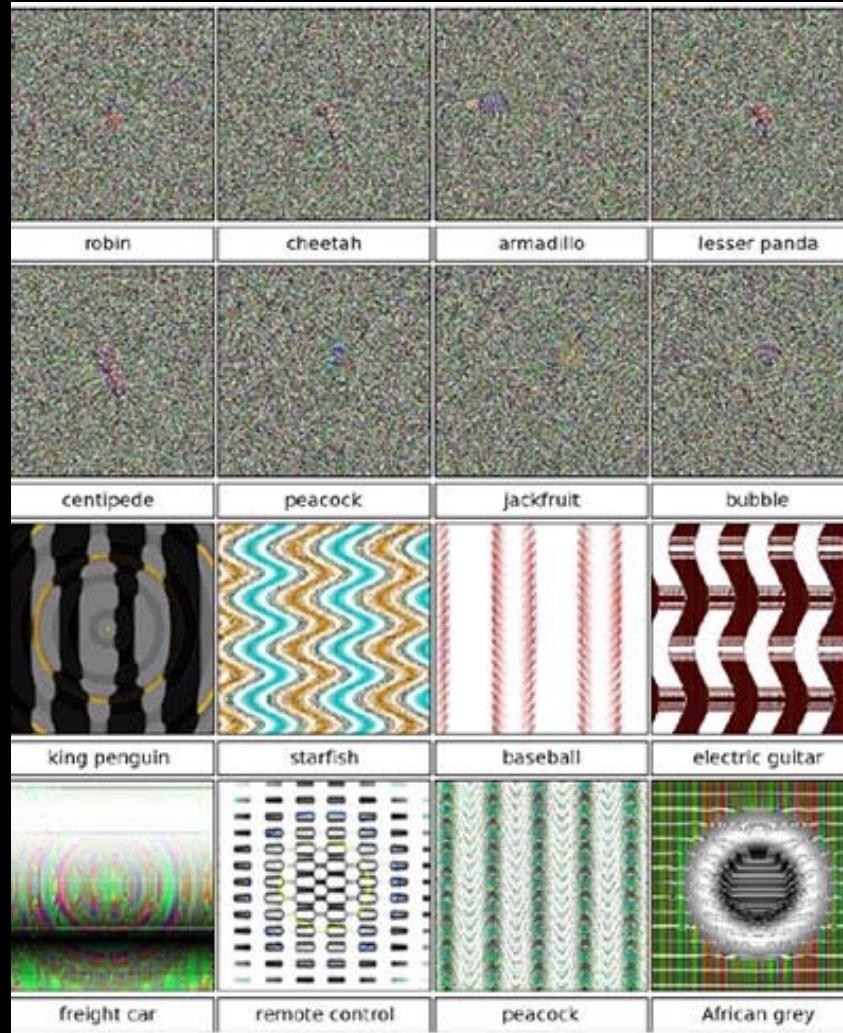

$$\text{Error} = \frac{1}{100,000} \sum 1[\text{incorrect on image } i]$$

# But Use with Caution!

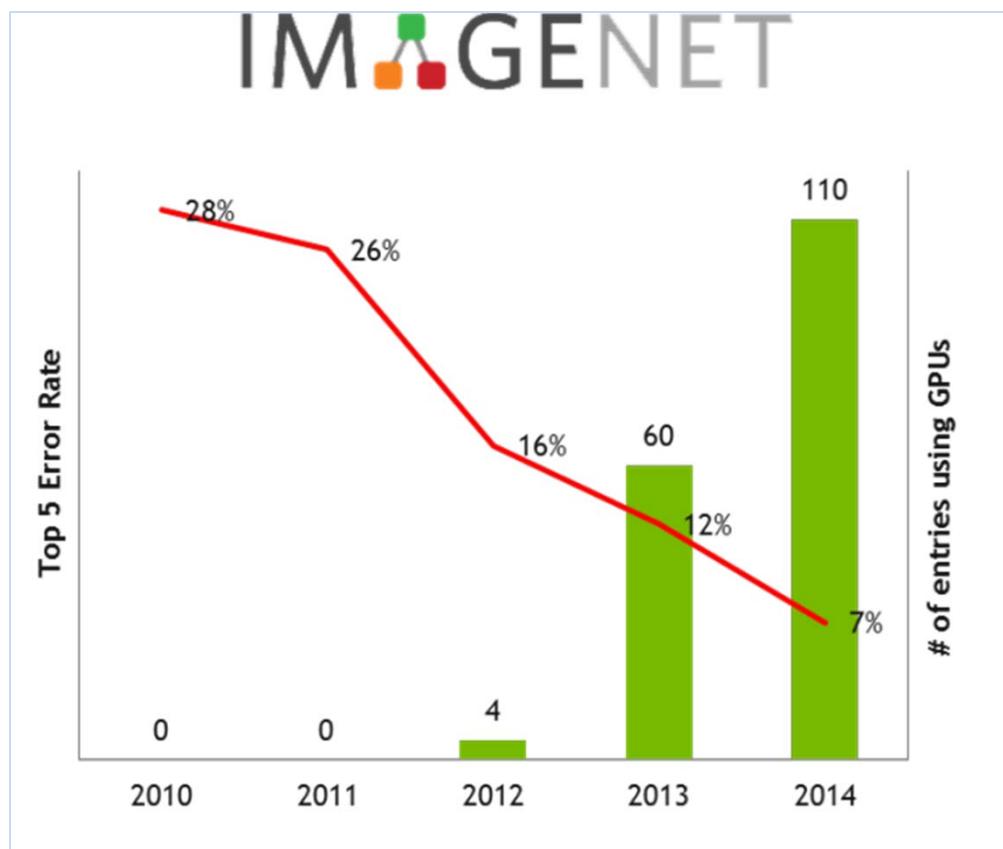

“Smart” Software Can Be  
Tricked into Seeing What Isn’t  
There

Nguyen, et al, CVPR 2015

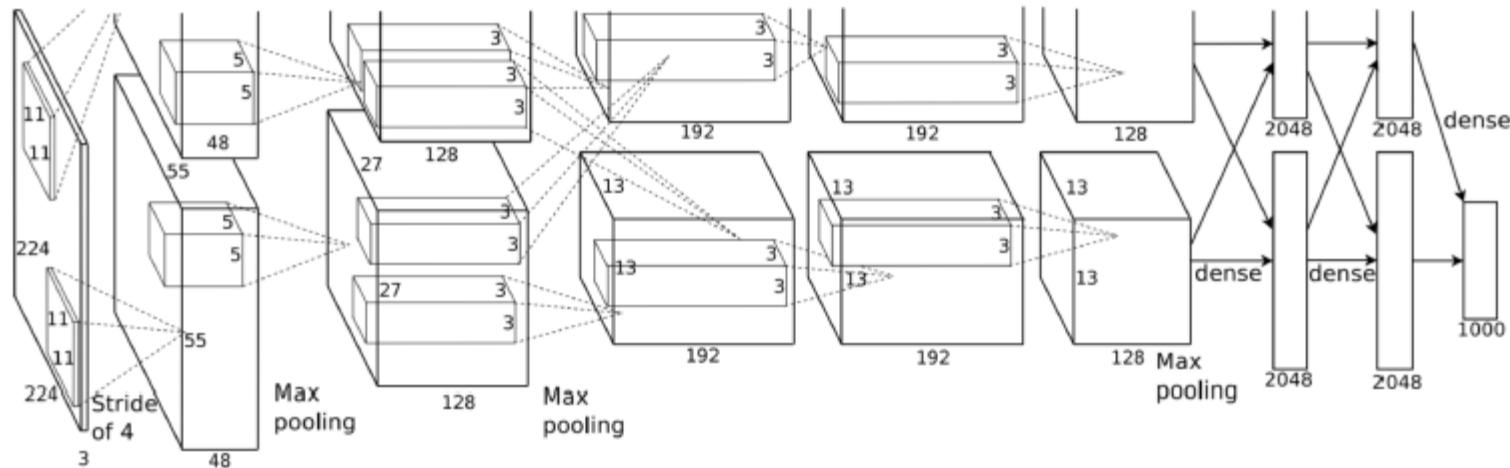

# Research Issue: Complexity

- How to handle huge data and computational cost?

# Circulant Neural Networks

AlexNet (Krizhevsky, et al, 2012)

Fully connected layer in neural networks (16 millions parameters to learn !)

- ▶ Captures global information.
- ▶ 90 - 95% of the memory in AlexNet.
- ▶ 20 - 30% of the computational time.

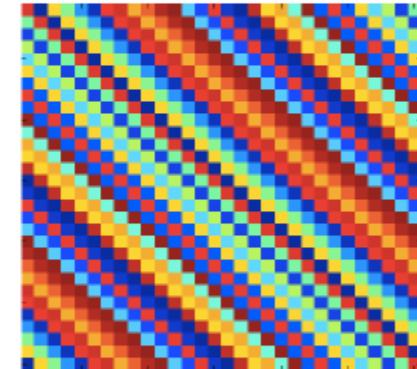

# Circulant Binary Embedding (CBE)

Replace fully connected layer with structured component:

$$h(\mathbf{x}) = \phi(\mathbf{R}\mathbf{D}\mathbf{x}), \phi(\cdot): \text{a nonlinear activation function}$$

- ▶  $\mathbf{R}$  is a **circulant matrix**, defined by  $\mathbf{r} = (r_0, r_1, \dots, r_{d-1})^T$

$$\mathbf{R} = \text{circ}(\mathbf{r}) := \begin{bmatrix} r_0 & r_{d-1} & \cdots & r_2 & r_1 \\ r_1 & r_0 & r_{d-1} & & r_2 \\ \vdots & r_1 & r_0 & \ddots & \vdots \\ r_{d-2} & & \ddots & \ddots & r_{d-1} \\ r_{d-1} & r_{d-2} & \cdots & r_1 & r_0 \end{bmatrix}$$

- ▶  $\mathbf{D}$  is a diagonal matrix, each entry  $\pm 1$  with probability  $1/2$  (random sign flipping, dropped to simplify notation)
- ▶ Gradient computation in back-propagation can be done using FFT.

## Circulant Neural Networks (cont'd)

Method	Time	Space	Time (Learning)
Conventional	$\mathcal{O}(d^2)$	$\mathcal{O}(d^2)$	$\mathcal{O}(ntd^2)$
Ours	$\mathcal{O}(d \log d)$	$\mathcal{O}(d)$	$\mathcal{O}(ntd \log d)$

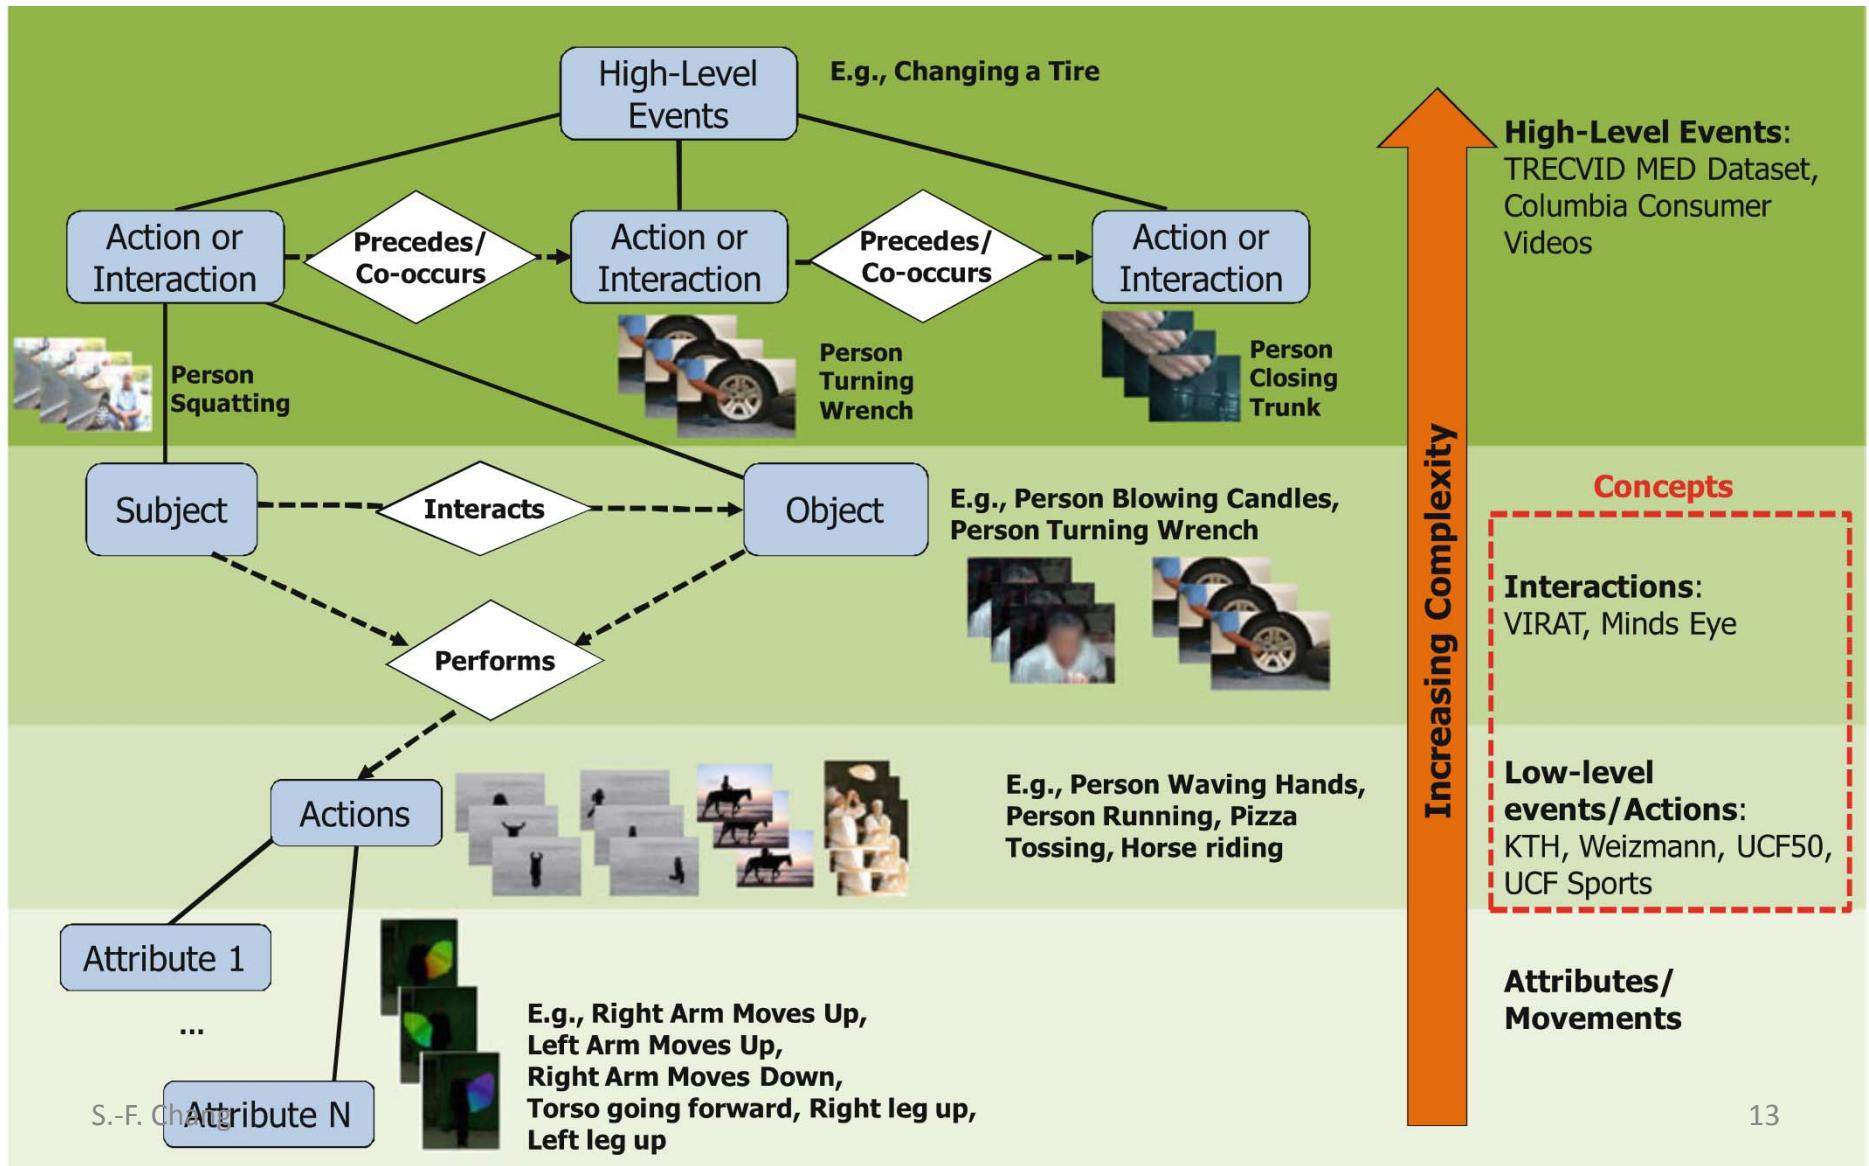

1000x less parameters in fc

- $4K \times 4K$  layer: 64MB  $\rightarrow$  16KB

Method	Top-5 Err	Top-1 Err	Memory
AlexNet (rand)	33.5%	61.7%	233.2MB
C-AlexNet (rand)	35.2%	62.8%	20.5MB
AlexNet	17.1 %	42.8%	233.2MB
C-AlexNet	19.4 %	44.1%	20.5MB
More parameters	17.8 %	43.2%	20.7MB
Reduced AlexNet	37.2 %	65.3%	20.7MB

# Open Issue: How to Describe Complex Events in Video?

- Y. Jiang et al., high level events recognition in unconstrained videos, IJMIR, 2012 (survey)

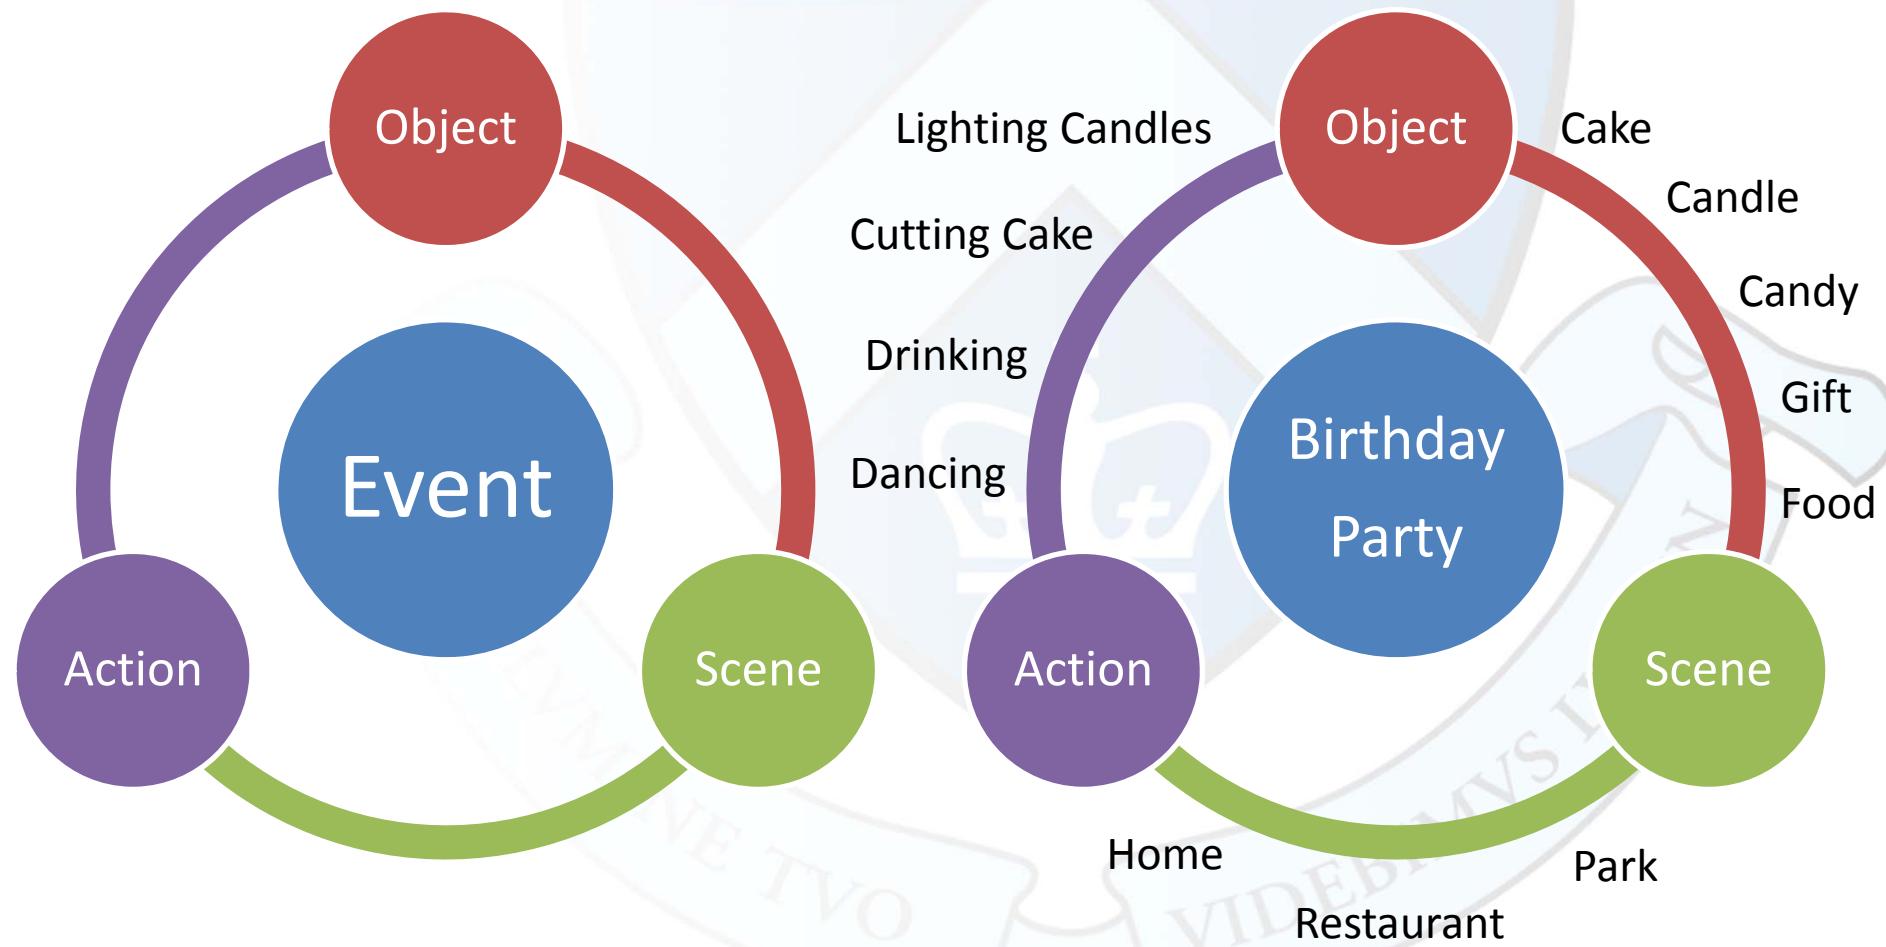

# Research: Complex Video Event Recognition

K.-T. Lai; F. X. Yu; M.-S. Chen; S.-F. Chang. CVPR 2014

- Detecting complex events in  $\sim 100,000$  videos

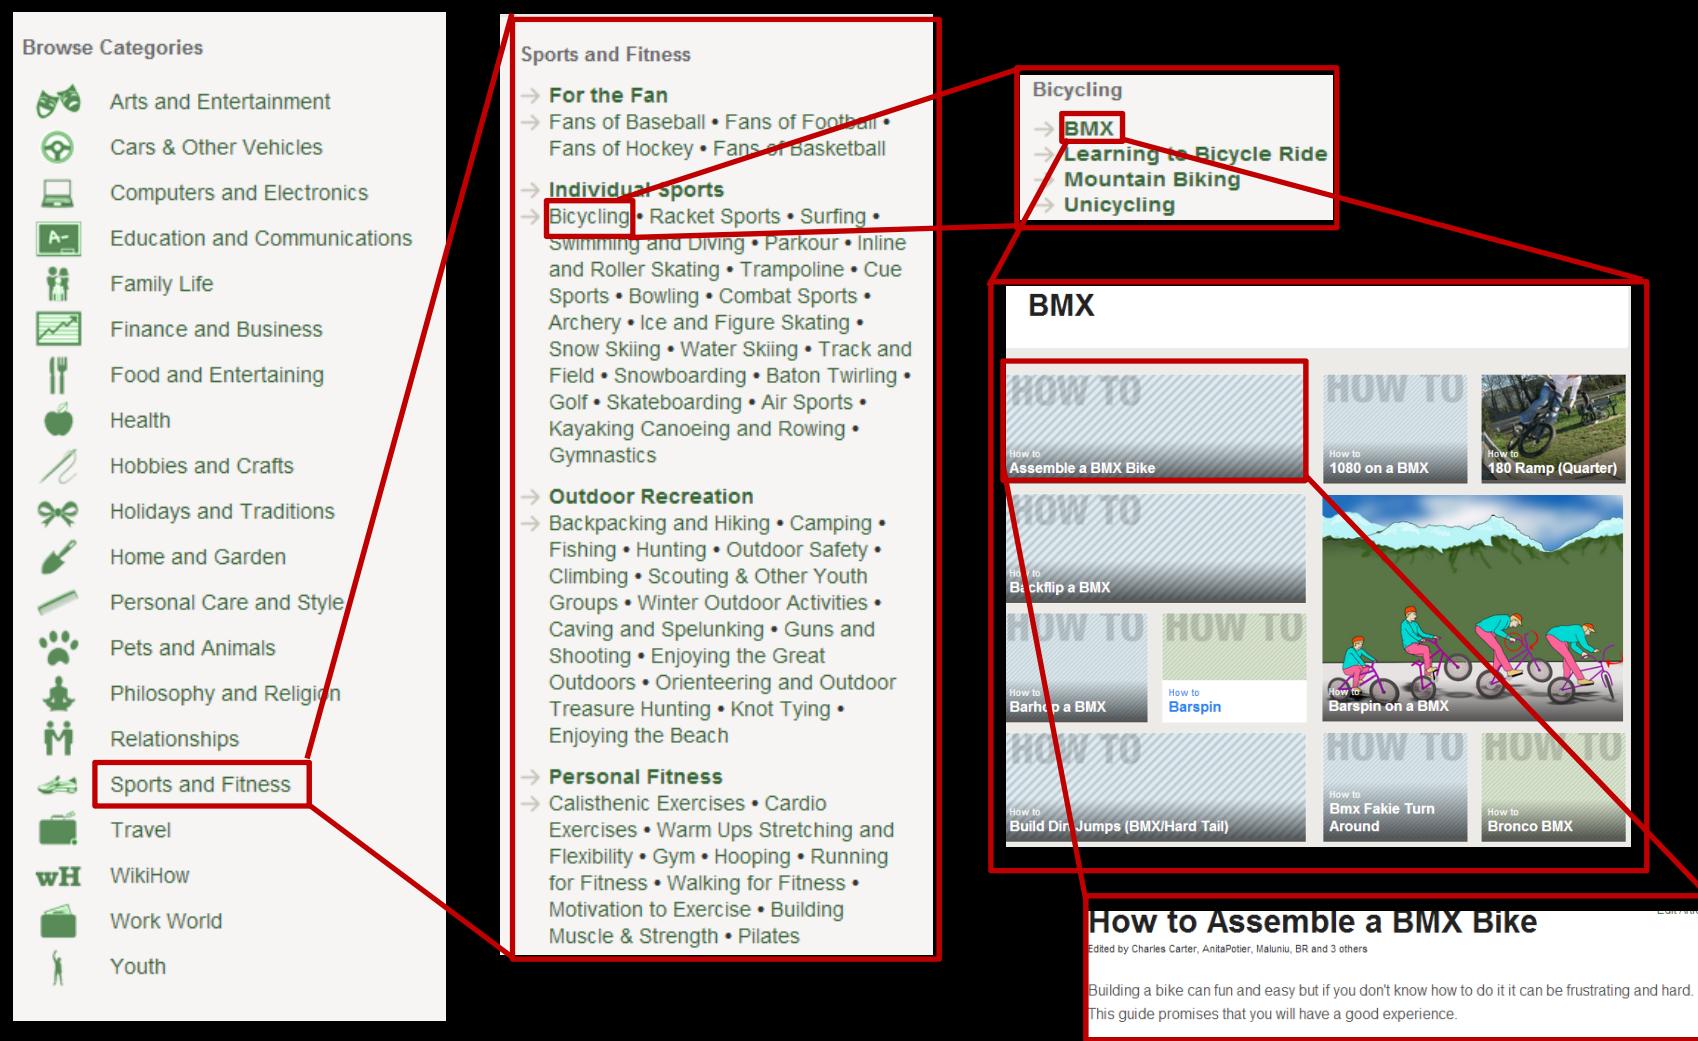

# What Salient Concepts Are Associated with Each Video Event?

# Inspiration from Crowd – WikiHow

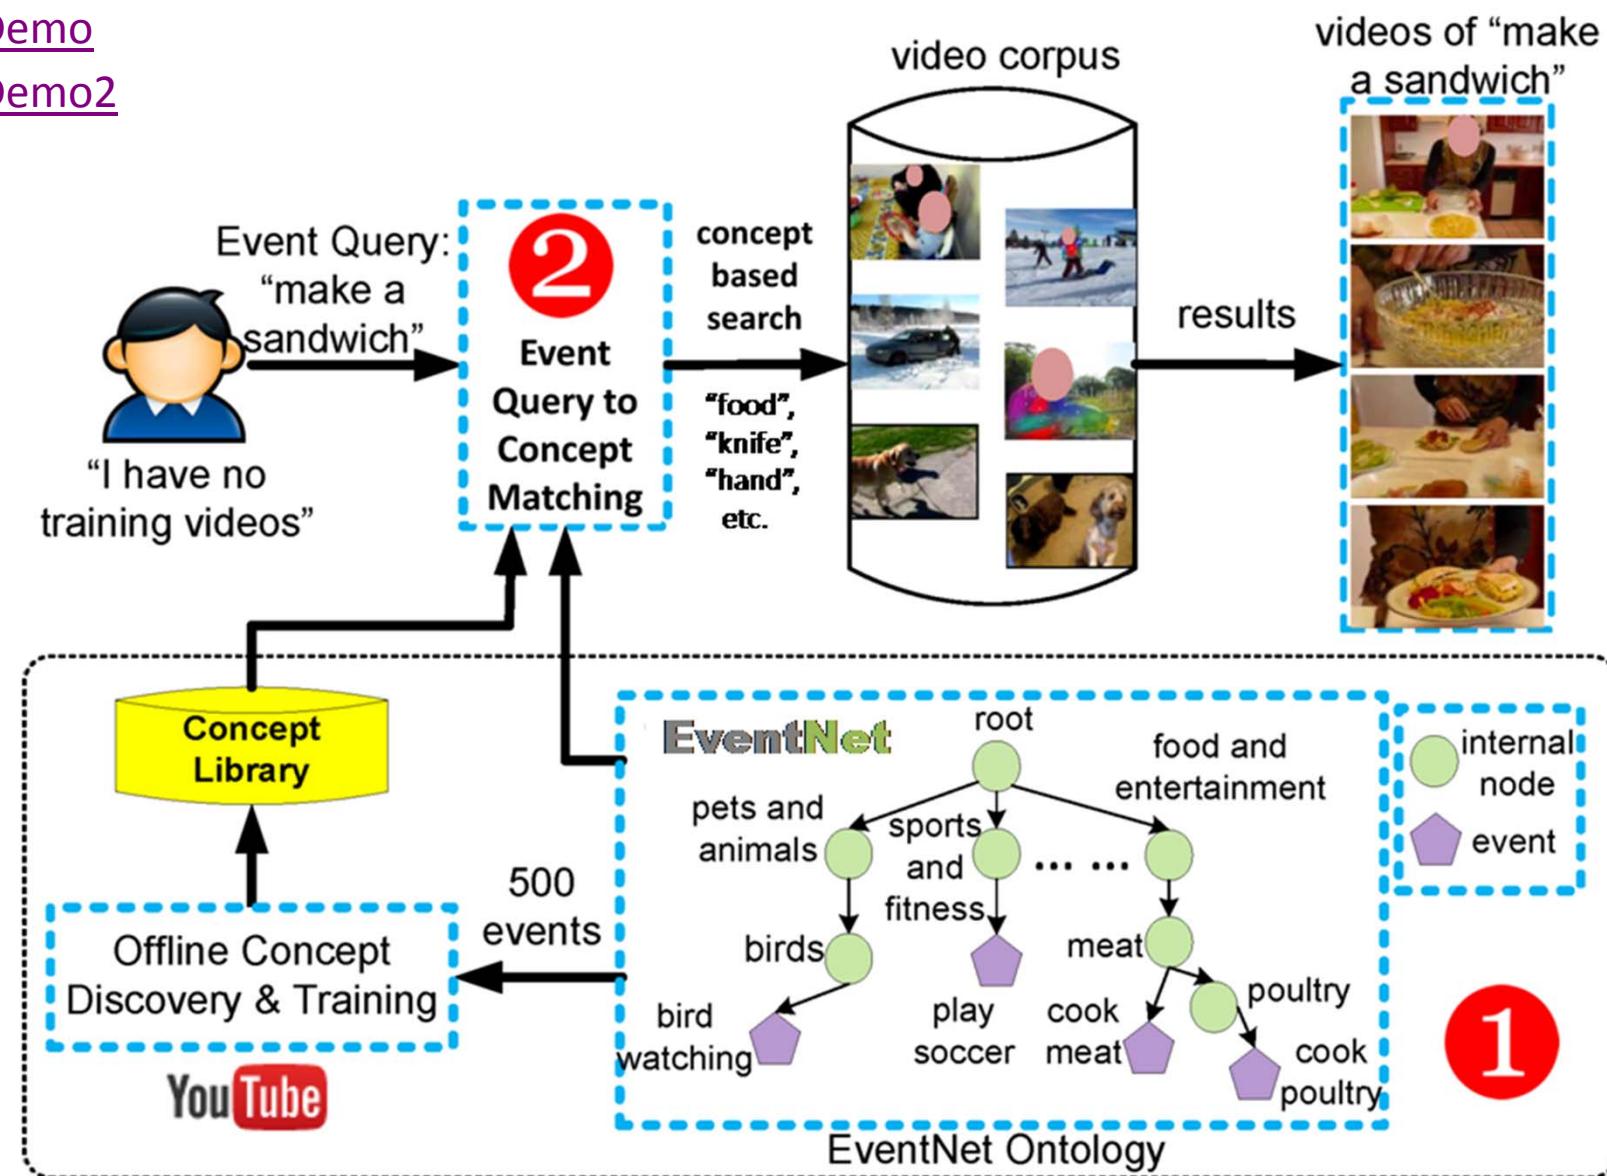

- A wiki contains ~300,000 articles on 2,803 “how to” category.
- All articles are organized into a hierarchical structure.

# Social Crowd Reporting (e.g., Waze)

The image shows the Waze mobile application interface. At the top, there is a blue header bar with the "waze" logo on the left and menu options: LIVE MAP, MAJOR EVENTS, SUPPORT, BLOG, and ABOUT on the right.

In the search bar, the starting point is set to "New York City, NY, United States" and the destination is "JFK Airport, NY, United States". Below the search bar, there is a button to "Check routes for a different time".

A large white box on the left displays driving instructions for the route from New York City to JFK Airport:

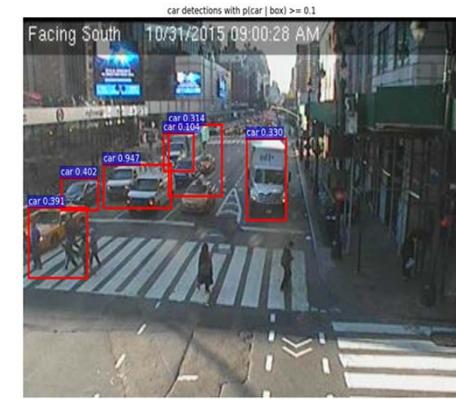

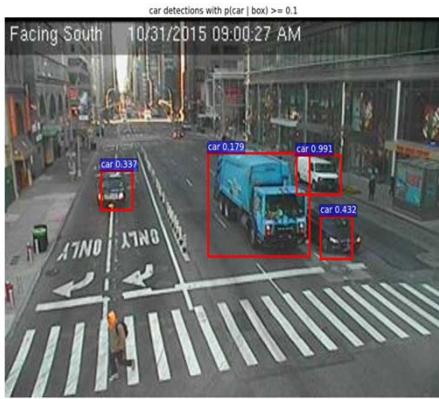

- < Driving instructions
- I-278 E Brooklyn; I-678 S / Van Wyck Expwy Queens
- 19.26 miles, 31 min
- Brooklyn Bridge**: After 1.03 miles, keep right to I-278 / Brooklyn Queens Expwy / Cadman Plaza W
- After 866.14 feet, keep right to I-278 / Brooklyn Queens Expwy

At the bottom left, there is a red button labeled "Edit the map".

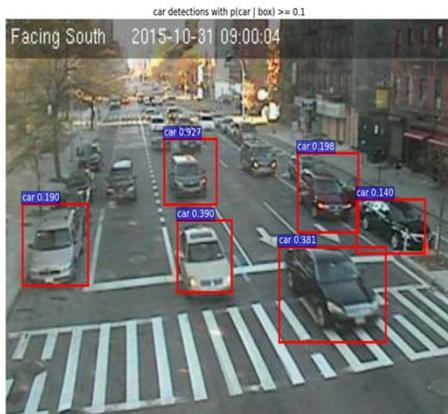

The main area of the screen is a map of New York City, specifically the Manhattan and Brooklyn areas. The map is overlaid with various social crowd reporting icons, including yellow warning signs, red circles with car icons, and pink circles with smiley faces. A specific report is highlighted in a white box in the center of the map, stating "Hidden Police Trap" reported by Teashie 25 min ago. Below the map, there is a legend for the icons.

# Computer Vision Tools

car detection - success in most cases:

car detection - some missing detections:

## Potential Applications and on-going research:

- Traffic patterns
- Accidents
- Individual vehicle condition:  
aggressive driving, abnormal driving, car breakdown
- Vehicle tracking across cameras

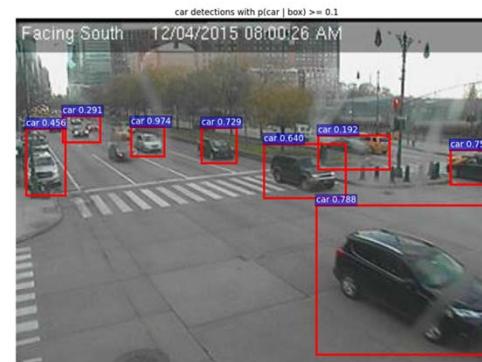

# observations

Three nearby cameras:

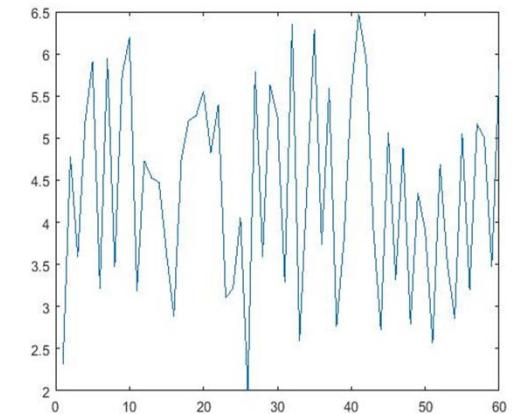

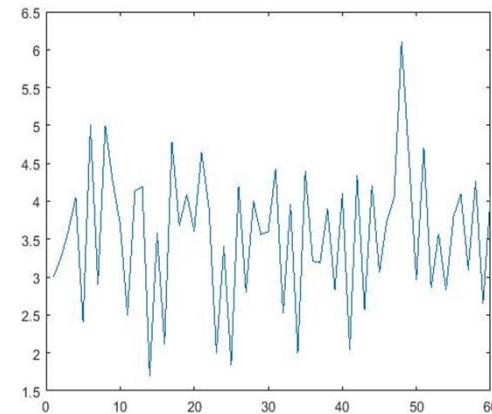

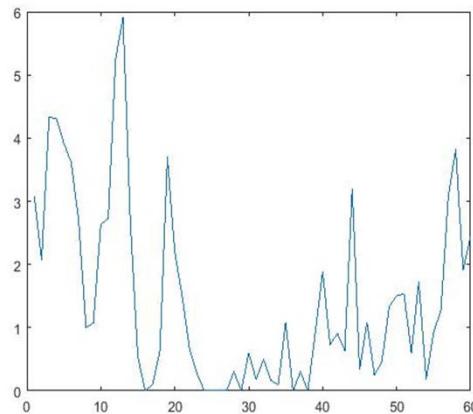

157-92\_Holland\_Tunnel

430-320\_RT\_9A @\_N\_Moore\_St

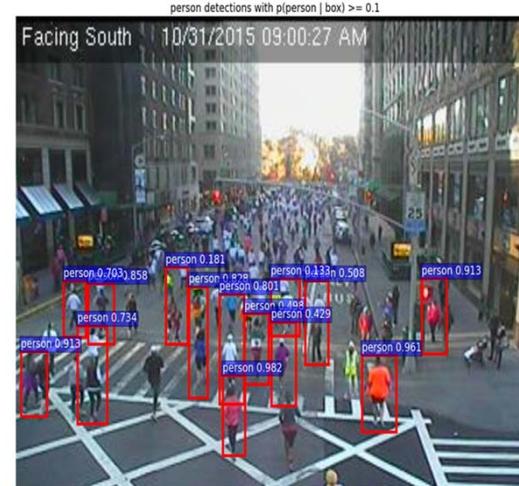

715-664\_West\_St @\_West\_Houston\_St

Number of cars detected on each image. 8am~9am. Dec 3rd. y: #car, x: minute.

# Person Detection

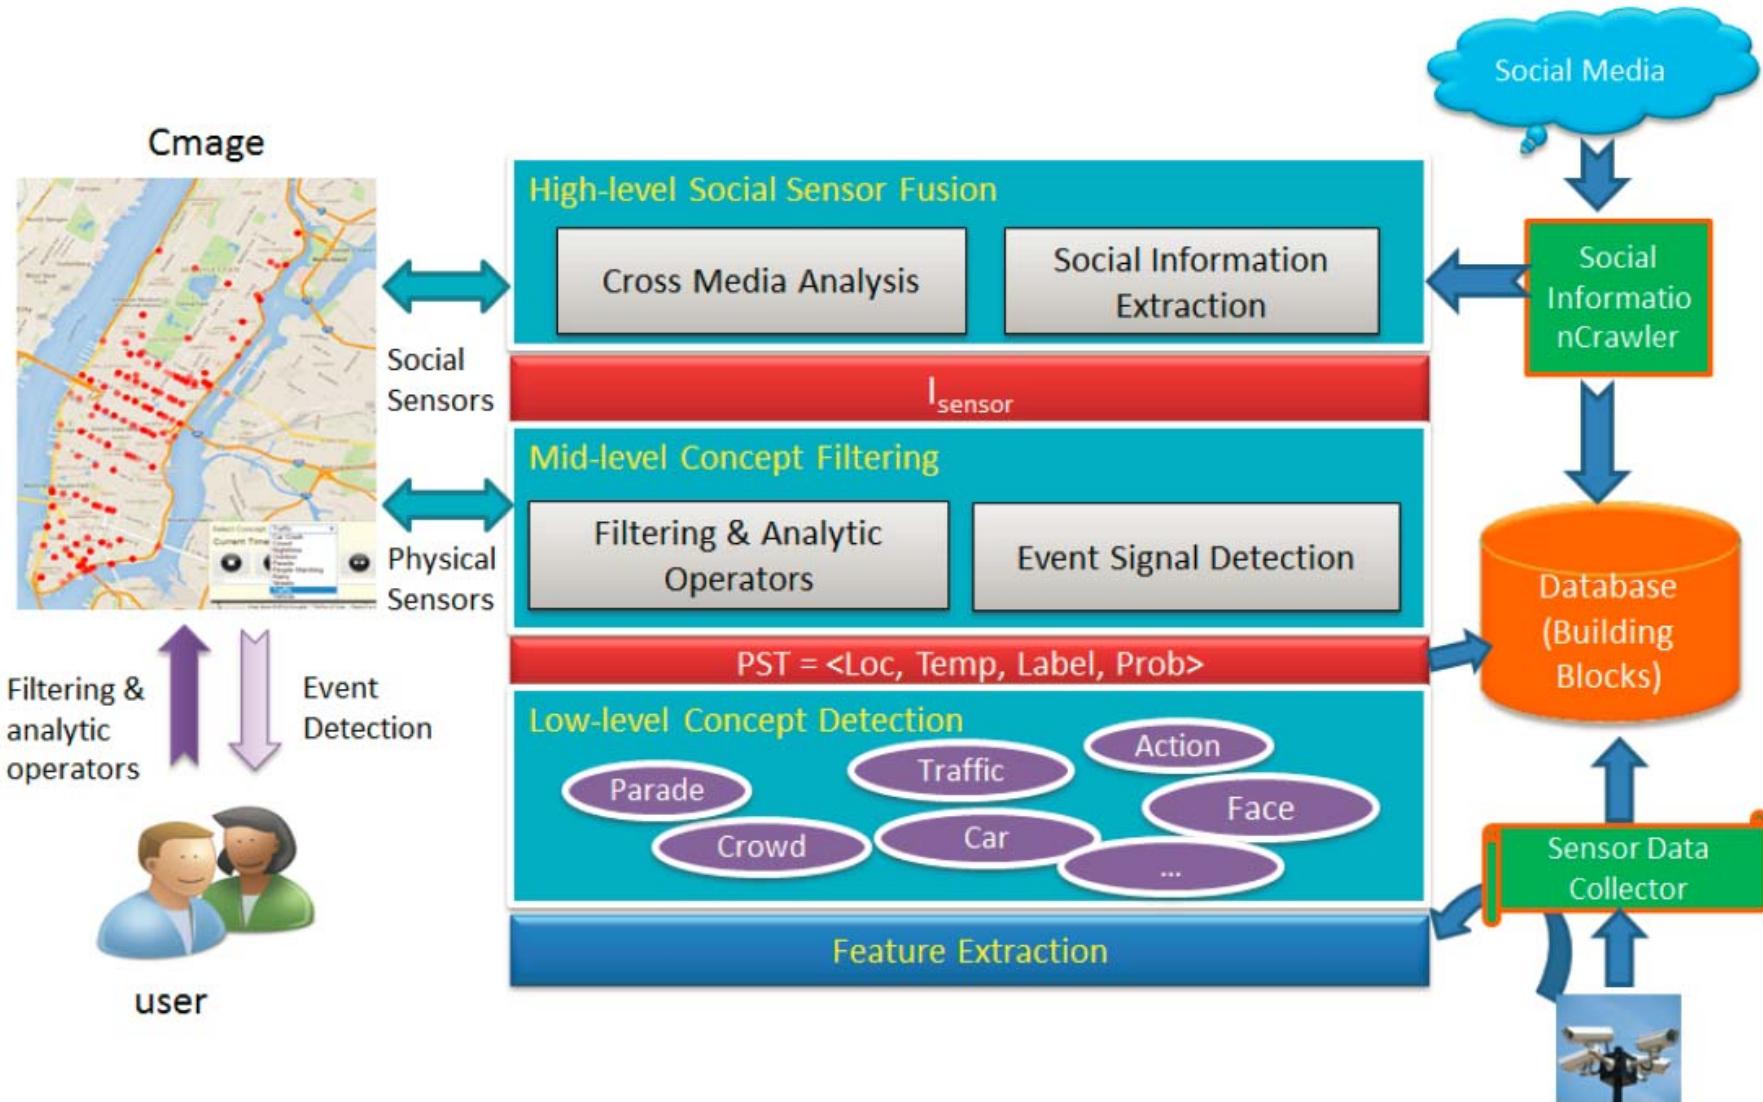

## Possible Applications:

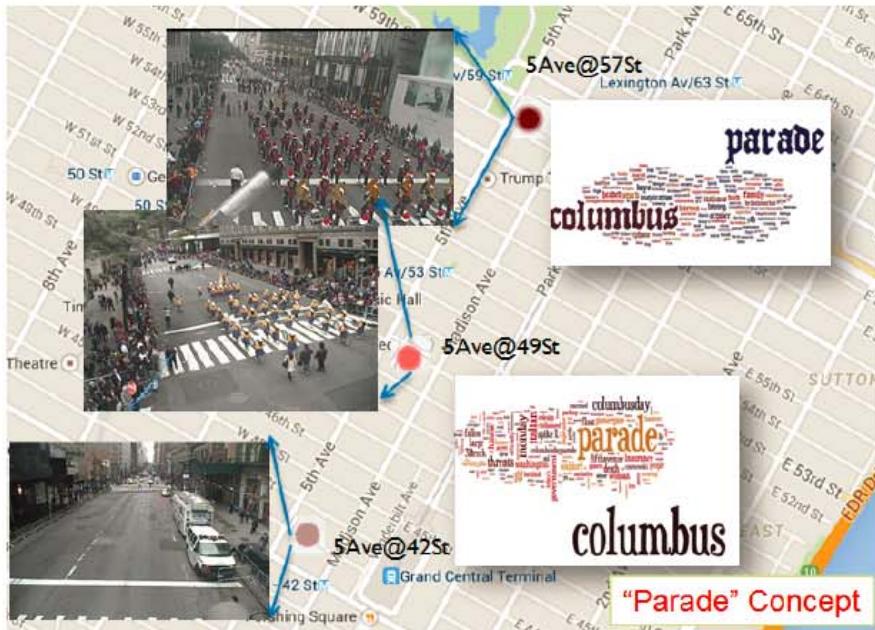

- People density: few people, crowd, crowd motion
- Categorize events: parade, marathon
- Social Behavior: random crowd vs. affiliated groups

# **DEMO**

# Social Tweeting Camera, (Wang & Kankanhalli, WWW'15)

# Combining Camera Sensors and Social Signals

(a) Social Sensor Fusion for  
“Columbus Day Parade”

(b) Social Sensor Fusion for  
“Hispanic Parade” Event

Wu & Kankanhalli, WWW'15

# Ongoing research Issues

## Deeper Analysis

- Vision: people, object, setting, events
- NLP: entity, topic, events, sentiments

## Joint Analysis

- Naming events seen in video
- Illustrating entities mentioned in text
- Disambiguate concepts (e.g., “truck”, “sign”)

# Social Sharing -> Opinion Expression

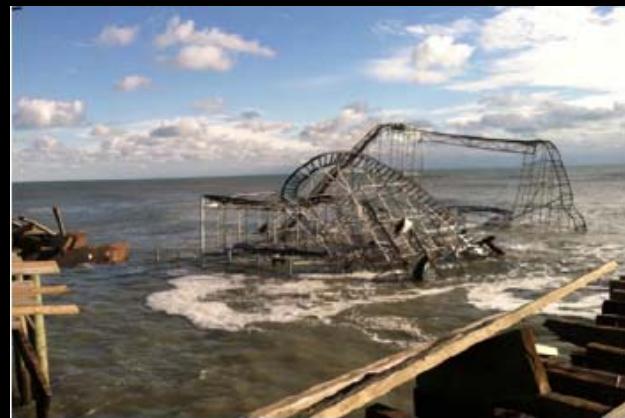

# The Power of Social (Visual) Multimedia

## 2012 Tweets of the Year

@BarackObama: Four more years.

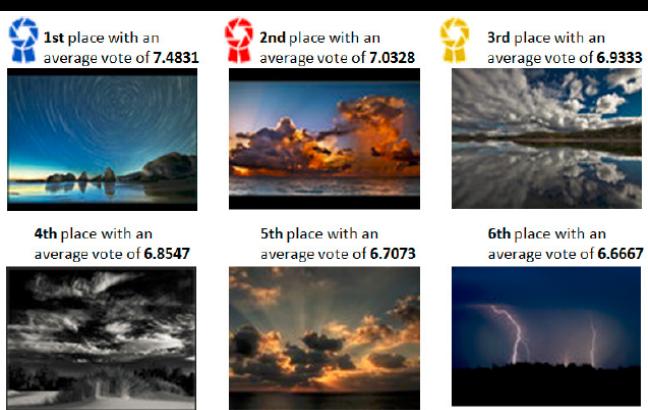

@Brynn4NY: Rollercoaster at sea.

@Fang-Ru: Queen of the far far away land.
