

LifePlanner

Project manager:
Katie Lin (kl2532)

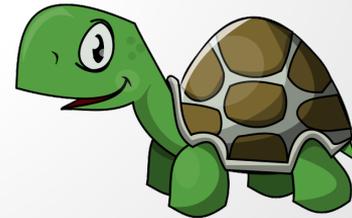

Language guru:
Rona Wo (yw2513)

System architect:
Rachel Lowe (rl2618)

System integrator:
Sean Liu (sl3497)

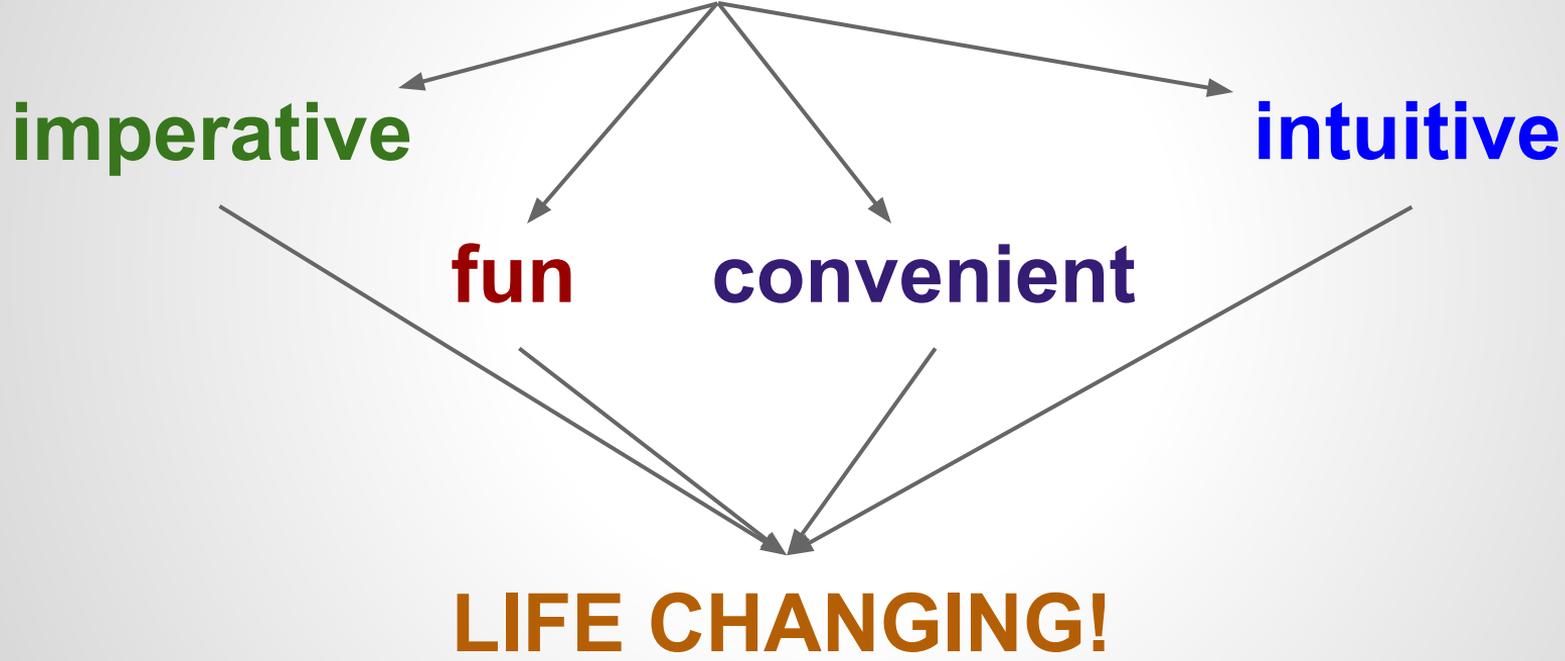

Tester:
Boyu Wang (bw2387)

Life is overwhelming.

LifePlanner is...

Time to plan your life!

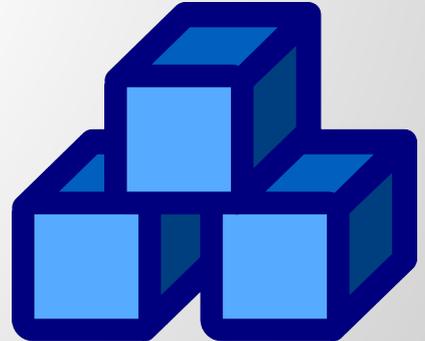

1. Function blocks (opt) :.) repeated functions
2. Import (opt) :.) import *.ics* file
3. Schedule (opt) :.) add events
4. “`build schedule`” :.) indicates end of schedule
5. Code to modify schedule (opt) :.) update your schedule
6. Export (opt) :.) export *.ics* file

Function Blocks

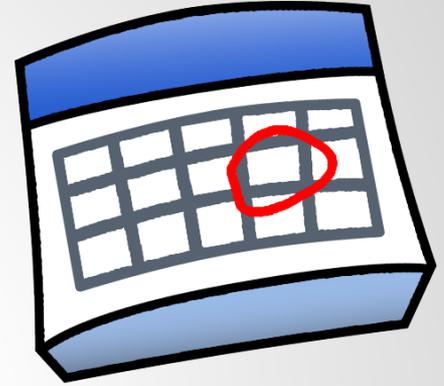

Function blocks are optional and are meant for more experienced programmers

```
function func_name(param1, param2)
    :) comments!
    :) expressions
    return "value"
```

Import Statements

Import your previous *.ics* files

.ics files are used by Google Calendar, Apple's iCal, WordPress (via plugins), etc

```
import myCal.ics
```

Schedule

Add events to your schedule

Date:

event name from time to time (at location with people)

5/13/2015:

PLT presentation from 11:30 AM to 12:00 PM

“build schedule”

key words

Indicates that you are done with your schedule and ready to start modifying it!

Code to Modify Schedule

some common expressions

1. `plan 5/12/2015: Free Cone` :) Special key words for adding/deleting events
`Day from 4:00 PM to 8:00 PM` :) as well as modifying the event properties
`at Häagen-Dazs`
2. `for i = 0, i < 3, i = i + 1` :) loops: for and while
`:) some stuff` :) assignment, boolean expression
`end` :) comments!
3. `if True` :) if statements
`time = time + 2 hours` :) booleans
`funcName(param1, param2)` :) math operations with times
`end` :) function call!

AND MORE!!

Export Statement

Export your newly edited schedule!

```
export newCal.ics
```

Still in *.ics* format so you can use your application to open it again!

Demo!

Group's Availability

0/5 Available  4/5 Available

Mouseover the Calendar to See Who Is Available

Translator Architecture

HelloWorld.plan

```
build schedule  
  print "Hello World!"
```

The Tokens

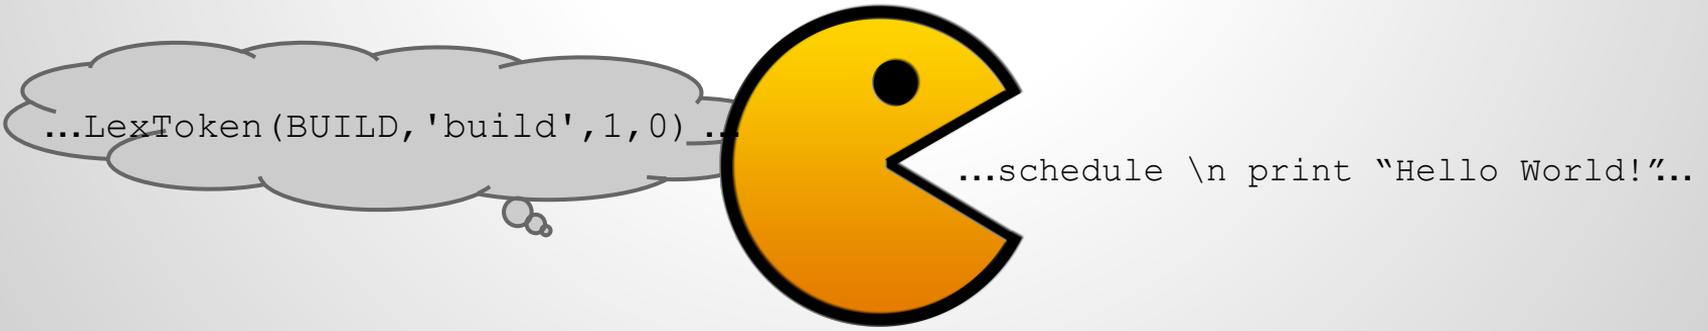

```
LexToken (BUILD, 'build', 1, 0)
```

```
LexToken (SCHEDULE, 'schedule', 1, 6)
```

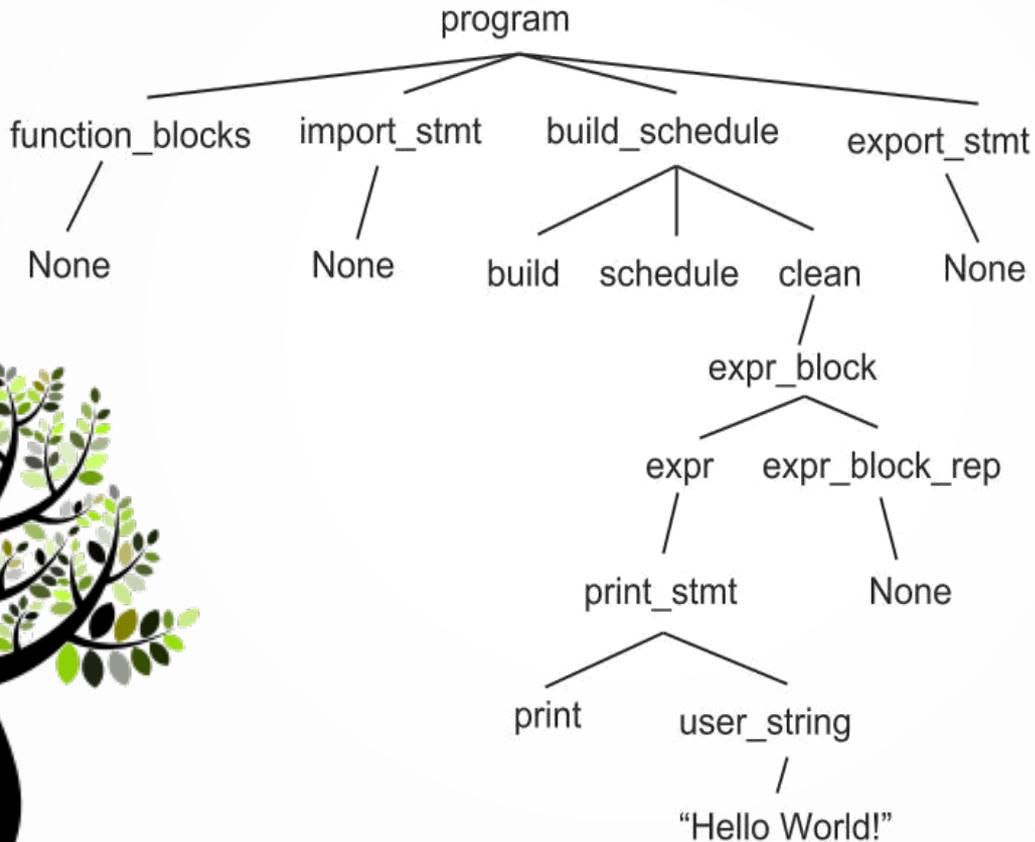

```
LexToken (NEWLINE, '\n', 1, 14)
```

```
LexToken (PRINT, 'print', 2, 16)
```

```
LexToken (USERSTRING, '"Hello World!"', 2, 22)
```

The Syntax Tree

The Translated Python Code

```
import datetime as dt
import time
import event as e
import ourCalendar as c

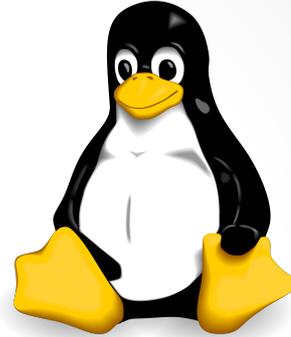

def get_event(name,
var_all_events):
    for event in var_all_events:
        if event['event_title'] ==
name:
            return event

cal = c.ourCalendar()
```

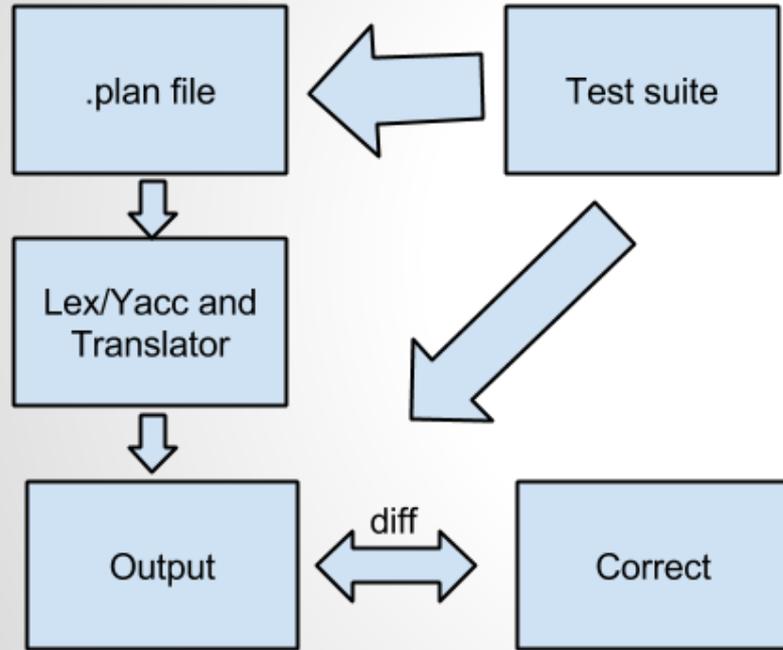

```
var_all_events = []
printed = False
str_print_item = "Hello World!"
for elem in var_all_events:
    if elem["event_title"] ==
str_print_item:
        elem.pop('uid', None)
        print elem
        printed = True

if not printed:
    print "Hello World!"
```

Runtime & Development Environment

Test Suite

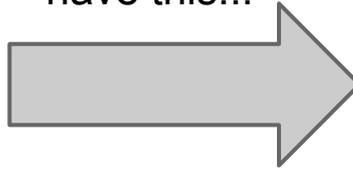

- We wrote our own test suite in Python
- Used `filecmp` to compare outputs and wrote a function to compare `.ics` files
- Integration: made sure past tests worked with every new feature

Sample Test Programs

Testing export of *.ics* files:

```
12/01/2016:  
    PLT from 2:40 PM to 3:55  
PM at Mudd with Aho  
build schedule  
export test26.ics
```

Once we
have this...

Testing import of *.ics* files:

```
import my.ics  
build schedule  
export test27.ics
```

**WHAT HAVE YOU
LEARNED?**

Lessons Learned

- Boyu: Communicate, communicate, communicate
- Katie: Meet frequently
- Rachel: Meet with Professor and TA mentor more often
- Rona: Should have made separate branches on GitHub
- Sean: Great team members make a huge difference!

Another demo!

LIFE.

Get good at it.
