

How to hookup the wireless connection to GoPiGo

1. Plug in wireless router
2. Connect to wireless router through your laptop
3. In a browser, type `tplinklogin.net` (if using TP Link router)
4. You should be asked for user id and password for the router – use “admin” for both
5. Click on DHCP
6. Click on DHCP clients list
7. Find IP address of dex
8. Using a terminal program like Putty, login to this IP address with user id “pi”
9. When prompted for password, use “robots1234”
10. You should get a Unix shell prompt
11. Change directory to Desktop (command is `cd Desktop`)
12. Type `ls`, and directory contents listed.
13. Change directory to `GoPiGo/Software/Python`
14. Software is here.
