Help Session: September 18, 2018

Agenda

- HTML
 - The skeleton
- CSS
 - The skin
- HTML/CSS Demo
- Next Time: JavaScript, jQuery (the muscle)

HTML

- HyperText Markup Language
 - HyperText → the method by which you move around on the web (clicking hyperlinks)
 - Markup → HTML tags *mark* the text inside them
- Used for describing web documents
- “The skeleton”

HTML Components

- HTML elements
 - The extent of an element is shown by a tag pair: a 'start tag' (e.g., <p>) and an 'end tag' (e.g., </p>)
 - Nested together to form an HTML document
 - Can have attributes, which provide more information

```
test.html
1
2 <a href="http://www.google.com">This is a link</a>
3 
```

Basic HTML Document Structure

- Tags:
 - DOCTYPE
 - HTML
 - Head
 - Body

```
untitled
1 <!DOCTYPE html>
2 <html>
3 <head>
4   <title>My First HTML Page</title>
5 </head>
6 <body>
7   <p>My text goes <strong>here</strong>. </p>
8 </body>
9 </html>
```

CSS

- Cascading Style Sheets
 - Used to describe the presentation of elements within an HTML document
- Adds style, such as:
 - Fonts
 - Colors
 - Spacing
- “The skin”

```
main.css
1 body h1 {
2   background: red;
3   color: white;
4 }
```

HTML and CSS

The image displays four windows illustrating the relationship between HTML, CSS, and their visual representation:

- test.html**: Shows the raw HTML code. It includes a DOCTYPE declaration, an HTML tag, a head section with a link to main.css and a script for Modernizr, and a body section containing a red h1 element with the text "OH HAI THERE".
- main.css**: Shows the CSS style sheet. It contains a single rule: body h1 { background: red; color: white; }.
- index.html**: Shows the browser rendering of the HTML. The h1 element is styled with a red background and white text, displaying the text "OH HAI THERE".
- index.html** (second instance): Shows the browser rendering of the HTML again, but this time the h1 element is styled with a red background and white text, displaying the text "OH HAI THERE". This second instance likely represents a later state or a different view of the same file.

- A skeleton with skin
