Response Rate 6/34 (17.65%)

• Overall, the material was interesting, but it feels like there were a lot of nuances that weren't covered, unlike AP. As an example, AP covered the difference between `const char *` and `char * const`. However, we didn't really talk about the differences between `auto const`, `const auto`, `auto&`, `auto&&`, and combinations of these that in depth. C++ of course has many more layers of abstraction than C, so I understand it isn't feasible to cover all of these small concrete details, but in my opinion those small details are part of what made AP special, and these felt just a little missing in C++. I would've also liked the labs to incorporate some of the material from the latter half of the course - by my count, there are ~5 lectures worth of material that wasn't tested on the labs. I learn a lot by doing the labs (there's a limit to how much of the material you can truly digest just from lectures), so that absence was felt. Finally, I think lecture notes à la AP would be really helpful - there's so many small nuances and so much material to keep track of, that while the sample code helps, it isn't a true replacement.

• Jae is a great communicator and is very knowledgeable! A rare combination.

• Overall, the course is well-structured and Jae is good at getting straight to business in lecture. For me personally, the course is too quick, but this IS an upper-level course and it's also a summer term... so it's no fault of Jae. I took this course immediately after taking AP, and in AP I always felt I had ample time to get comfortable with the material. If I'm being honest, I have a general understanding of how C++ works now but it's all hazy (and I got an A in AP, just for reference) and I don't think I'm spending too little time on reviewing and the homework. One of the AP TAs had mentioned in a listserv post that this course is back heavy, and now I understand what he means. I personally think that this course would benefit from 5 labs instead of 4 (for the sake of having more time to practice the learned concepts) with the last two labs being the size of lab 3. For me, lab 3 felt comfortable and then lab 4 felt like I was thrown into the ocean so suddenly. My main criticism has to do with the lab instructions and response rate on the listserv. I get that the labs are written (from my understanding) by the smart TAs, and I commend them for that, but I don't think these labs are completely clear with what we should be doing. The sequence of instructions tends to be all over the place and then we receive little clarification from TAs (lack of responses on the listserv). Again, this is an upper-level course and we should be learning a lot on our own, so maybe it's just my lack of experience talking. I'm also comparing this course to AP, which has had years and years of work done to get it where it is now. If I'm not comparing it to AP, the structure of this class is great. By the way, a recitation once or twice the entire summer term wouldn't hurt. Lab 4 would be significantly less confusing if we just had a TA clarify anything that's not super clear in the lab instructions and perhaps offer some guidance in how to approach (for example, Kent's advice for lab 4 2b was excellent). TAs are just as good as in AP. I had TAs in other CS classes that don't really know what's going on so it's always refreshing to receive help from these smart folks.

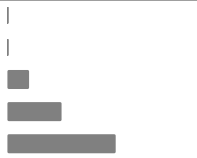

• While I don't think this course is any match for COMS 3157, it was well-taught, and I feel like I have a good foundational knowledge of C++ after taking this class. (no prior experience) For a summer class, the workload was more than I would have imagined. As always with Jae, assignments are creative, clever, and give students real experience with C++ features. Definitely worth taking!

• Having most of the grading depend on the labs is a great way of truly assessing the students, considering the complexity of the labs.

• Maybe add an extra late to have 5 late days instead of 4. Professor Jae is an amazing teacher. If I were to improve one thing, I would feel it is the process of asking questions. I don't want to interrupt the professor when he is speaking, but I will have a question, raise my hand to indicate I have a question, Jae would see my raised hand, keep talking, I would lower my hand to wait for him to finish his thought, he would finish his thought, and sometimes just keep going. This only happens sometimes, and I usually wait until after class to bring up the questions I had, but this is one thing that I noticed. It's not a big deal, but just thought to mention it. Other than that, the class was excellent.

<ul style="list-style-type: none"> Jae is the best professor I have ever had in Columbia. He is a role model. He is a professional. Always prepare, always know what he is doing, always interesting. Both in AP and in C2CPP I have learned the most that I ever learned in a single class. Jae is a great communicator and is very knowledgeable! A rare combination. Also, Jae is very organized and clearly puts in a lot of effort and thought into his instruction. Most of my teachers at Columbia have been lacking in charm and ability to convey ideas, and Jae excels at both of these. I wish I could take OS with Jae because I think his level of organization is what has been carrying me through this difficult material. Excellent professor. Very knowledgeable on topics discussed. Has a great and comprehensive answer to every question asked. Also entertaining. Jae is a very nice instructor who is passionate in teaching. It is always good to take his class.

Fangxin Lin

Response Rate 2/34 (5.88%)

- Fangxin is great! Kind, honest, knowledgeable and approachable during OH. Listened patiently to some of my lab issues, and pointed me to how to best fix them in a very informative way.
- very nice a though guy, even if he doesnt have the answer during OH, he will follow up with it later by email.

Hans Montero

Response Rate 2/34 (5.88%)

- Incredibly knowledgeable and smart TA. Not the most approachable when I'm trying to clarify something with him and clearly struggling. Helped me a lot though.
- Hans is a fantastic TA! He takes time to answer listserv questions thoughtfully and comprehensively, and is on top of it. Very knowledgeable and very epic.

Maylis Whetsel

Response Rate 2/34 (5.88%)

- Just as great as in AP. Super down-to-earth, friendly, and knows what she's doing.
- Maylis is quite possibly my favorite person ever. She is very knowledgeable, super approachable, and helpful during OH without being impatient or giving away too much.

Xijiao Li

Response Rate 3/34 (8.82%)

- Xijiao is awesome!!
- My favorite TA. Quick at understanding what's going on in my mangled code and able to offer suggestions on the spot. (Would've appreciated more notice when changing schedules for OH though!)
- I love Xijiao!! She's kind, approachable, and knows the material.
