Ethernet and the Internet

Sockets

USB: The Universal Serial Bus

libusb 1.0

POSIX Threads (pthreads)
Ethernet and the Internet
Ethernet

Started in about 1976 at Xerox PARC

IEEE Standard 802.3

Carrier-sense multiple access/cARRIER detect protocol:

1. Listen to the cable
2. If nobody’s there, start talking
3. If someone interrupts, stop, and retry after a random time
10Base-5 “Thicknet”

Shared coax bus with “vampire tap” tranceivers 802.3 std. suggests yellow

From http://www.turkcenet.org/yerel_htm/10base5.htm
10Base-2 “Thinnet”

50-Ohm coax segments with BNC “T” connectors  Coax invariably black

From http://www.answers.com/topic/10base2
10Base-T and 100Base-T

Put the shared medium in a hub: star topology  Everybody uses it now

100Base-TX wiring (CAT 5)

Pair of twisted pairs, one pair for each direction.

Uplink or MDI port

|^|
|---|---|
|Tx | Rx |
|1  | 2  |
|3  | 6  |

Straight-through twisted pair cable

Normal or MDI-X port

|^|
|---|---|
|Tx | Rx |
|1  | 2  |
|3  | 6  |

Hub-to-computer cable is straight-through.
Computer-to-computer cable is a “crossover;” most hardware can now adapt.

From the Netgear EN104TP 4-port hub manual off of Amazon.com.
An Ethernet Frame

<table>
<thead>
<tr>
<th>7 bytes</th>
<th>1</th>
<th>6</th>
<th>6</th>
<th>2</th>
<th>46–1500</th>
<th>4</th>
</tr>
</thead>
<tbody>
<tr>
<td>Preamble</td>
<td>SOF</td>
<td>Dest.</td>
<td>Src.</td>
<td>Type</td>
<td>Payload</td>
<td>Checksum</td>
</tr>
</tbody>
</table>

- **SOF**: Start of Frame
- **Dest.**: Destination address
- **Src.**: Source address
- **Type**: Type of packet or length of data field
  - 0x0800 for IP, 0x0806 for ARP, etc.

Bytes sent LSB first

Minimum packet length: 64 (6 + 6 + 2 + 46 + 4)

Lengths > 1500 indicate packet type
Ethernet (MAC) addresses

48 bits \( \approx \) 281 trillion (world population: 7.9 billion)

Bits 48–24  Vendor code (OUI)
Bit 41    0=ordinary, 1=group (broadcast) address
Bits 23–0  Serial number

On one of my machines:

```
$ ifconfig eth0
eth0 Ethernet HWaddr 00:18:f3:ef:2b:36
```

OUI (Organizationally Unique Identifier):

00:18:f3 is ASUS (the machine’s motherboard manufacturer)

Address FF:FF:FF:FF:FF:FF is broadcast
An Ethernet Packet

00d006269c00  Destination MAC address (router)
00087423ccab  Source MAC address (desktop)
0800          Type = IP packet
45            IPv4, 5 word (20-byte) header
00            Normal service
0028          Total length = 40 bytes
c31c           Identification (unique)
4000          “Don’t Fragment”
40            64 hops to live
06            TCP protocol
3ff1          Header checksum (one’s complement)
803b1372      Source IP 128.59.19.114 (desktop)
40ec6329      Destination IP 64.236.99.41

deac 0050 bf49 9ba6 a1a4 8bed 5010 ffff 1093 0000 (payload)
### IP Header

32 bits $\approx$ 4 billion (world population: 7.9 billion)

First $n$ bits indicate network ($n = 8, 16, 24$)

For example, columbia.edu
owns 128.59.0.0 – 128.59.255.255

Magical addresses:

127.0.0.1  “Me”
192.168.x.x Never assigned worldwide
10.x.x.x Never assigned worldwide
255.255.255.255 Broadcast
```c
// Create an Internet socket (SOCK_STREAM = TCP)
int sockfd = socket(AF_INET, SOCK_STREAM, 0);

#define IPADDR(a,b,c,d) htonl(((a)<<24)|((b)<<16)|((c)<<8)|(d))

#define SERVER_HOST IPADDR(192,168,1,1)
#define SERVER_PORT htons(42000) // host to network byte order short

struct sockaddr_in serv_addr = { AF_INET, SERVER_PORT, { SERVER_HOST } };

// Connect to the server
connect(sockfd, (struct sockaddr *) &serv_addr, sizeof(serv_addr));

// Write to the socket
write(sockfd, "Hello_World!\n", 13);

// Read from the socket: block until data arrives
#define BUFFER_SIZE 128
char recvBuf[BUFER_SIZE];
read(sockfd, &recvBuf, BUFFER_SIZE - 1));
```
USB: The Universal Serial Bus
USB: Universal Serial Bus

1.5 Mbps, 12 Mbps, 480 Mbps (USB 2.0), 5 Gbps (USB 3.0; two additional pairs)

Point-to-point, differential, twisted pair

3–5m maximum cable length
<table>
<thead>
<tr>
<th>Series &quot;A&quot; Connectors</th>
<th>Series &quot;B&quot; Connectors</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Series &quot;A&quot; plugs are always oriented <strong>upstream</strong> towards the <em>Host System</em></td>
<td>- Series &quot;B&quot; plugs are always oriented <strong>downstream</strong> towards the <em>USB Device</em></td>
</tr>
</tbody>
</table>

**"A" Plugs** *(From the USB Device)*

**"A" Receptacles** *(Downstream Output from the USB Host or Hub)*

**"B" Plugs** *(From the Host System)*

**"B" Receptacles** *(Upstream Input to the USB Device or Hub)*
USB signaling

NRZI: 0 = toggle, 1 = no change

Bit stuffing: 0 automatically inserted after six consecutive 1s

Each packet prefixed by a SYNC field: 0 0 0 1 1

Low- vs. full-speed devices identified by different pull-ups on D+/D- lines
USB Packets

Always start with SYNC

4-bit type; 4-bit type complemented

2 bits distinguish Token, Data, Handshake, and Special; two more bits select sub-types

Data, depending on packet type

Data checked using a CRC

Addresses (1-128) assigned by bus master, each with 16 possible endpoints
USB Protocol

Polled bus (USB 1.0, 2.0): host initiates all transfers. USB 3.0 is full-duplex

Most transactions involve three packets:

- “Token” packet from host requesting data
- Data packet from target
- Acknowledge from host

Supports both streams of bytes and structured messages (e.g., control changes).
USB Data Flow Types

- **Control**
  For configuration, etc.

- **Bulk Data**
  Arbitrary data stream: bursty

- **Interrupt Data**
  Timely, reliable delivery of data. Usually events.

- **Isochronous Data**
  For streaming real-time transfer: prenegotiated bandwidth and latency

Libusb 1.0

User-level C library for USB device access. lsusb built on it.

www.libusb.org

1.0 API supplants earlier libusb 0.1

Nice tutorial: http://www.dreamincode.net/forums/topic/148707-introduction-to-using-libusb-10/
Using libusb

1. Initialize the library with `libusb_init()`
2. Select your device from the list returned by `libusb_get_device_list()`. Later, free the list with `libusb_free_device_list()`.
3. Initiate contact with `libusb_open()`
4. Claim the interface with `libusb_claim_interface()`
5. Communicate using the various `libusb_..._transfer()` functions
6. Release the interface with `libusb_release_interface()`
7. Close the device with `libusb_close()`
8. Close the library with `libusb_exit()`
libusb: Finding a Keyboard

```c
libusb_device **devs;
struct libusb_device_descriptor desc;
struct libusb_device_handle *keyboard = NULL;
ssize_t num_devs, d; uint8_t i, k;
uint8_t *endpoint_address;
num_devs = libusb_get_device_list(NULL, &devs);
for (d = 0 ; d < num_devs ; d++) {
    libusb_device *dev = devs[d];
    libusb_get_device_descriptor(dev, &desc);
    if (desc.bDeviceClass == LIBUSB_CLASS_PER_INTERFACE) {
        struct libusb_config_descriptor *config;
        libusb_get_config_descriptor(dev, 0, &config);
        for (i = 0 ; i < config->bNumInterfaces ; i++)
            for ( k = 0 ; k < config->interface[i].num_altsetting ; k++ ) {
                const struct libusb_interface_descriptor *inter =
                    config->interface[i].altsetting + k;
                if ( inter->bInterfaceClass == LIBUSB_CLASS_HID &&
                    inter->bInterfaceProtocol == USB_HID_KEYBOARD_PROTOCOL) {
                    libusb_open(dev, &keyboard);
                    *endpoint_address = inter->endpoint[0].bEndpointAddress;
                    libusb_claim_interface(keyboard, i);
                    libusb_free_device_list(devs, 1);
                    return keyboard;
                }
            }
    }
}
```

POSIX Threads (pthreads)
**Creation and Termination**

```c
#include <stdio.h>
#include <pthread.h>

void *mythread(void *ptr)
{
    printf("%s\n", (char *)ptr);
    return NULL;
}

int main()
{
    pthread_t thread1, thread2;
    const char *message1 = "Thread_1", *message2 = "Thread_2";

    pthread_create( &thread1, NULL, mythread, (void *)message1);
    pthread_create( &thread2, NULL, mythread, (void *)message2);

    pthread_join( thread1, NULL);
    pthread_join( thread2, NULL);

    return 0;
}
```

http://www.yolinux.com/TUTORIALS/LinuxTutorialPosixThreads.html
#include <stdio.h>
#include <pthread.h>

pthread_mutex_t mutex1 = PTHREAD_MUTEX_INITIALIZER;
int counter = 0; /* Caution: shared variable */

void *incCounter() {
