Discrete Math W3203, Spring 2015
Homework Instructions

1) All HW problems are from the Rosen textbook.

2) Exercises must be submitted to the TA-box, or directly to a TA, NOT to the instructor.

3) Please attach (staple) the cover page to your submitted hw.

4) You are allowed to submit two late hws without penalty as long as the HWs are submitted within two days of the due date.

Note 1: Try to do the individual exercises within 24 hours of the class in which the related material appears, i.e., long before the due date for the set.

Note 2: For almost every even-numbered exercise in the Rosen text, there is a similar odd numbered problem, whose UNOFFICIAL solution is given in detail in the student guide. Although most of these solutions are correct, some are not.

Note 3: Most of the exercises for chapters 1 & 2 are well below the level expected on an exam.
