2008-2009 CS DISTINGUISHED LECTURE SERIES

COLUMBIA UNIVERSITY DEPARTMENT OF COMPUTER SCIENCE

presents Peter G. Neumann of SRI International on

Integrity of Elections

LOCK

TO RIGHT

Elections demand end-to-end integrity of voting processes, with additional trustworthiness requirements such as system security, privacy, usability, and accessibility. The overall system aspects present a paradigmatic hard problem. In today's systems and procedures, essentially everything is a potential weak link. The pervasive nature of the risks is astound-YOU HAVE SELECTED MAXIMUM NUMBER ing, with a serious lack of system archi-OF CANDIDATES FOR THIS OFFICE tecture, good software engineering YOU ARE SATISFIED practice, and understanding of se-WITH YOUR SELECTION curity problems. This talk will dis-LOPERATE VOID LEVER cuss limitations in existing systems, processes, standards, LOCK and evaluations. It will also LEVER consider some possible O REMOVE BALLOT alternatives--including nontechnological approaches, computerbased systems, and possible roles for cryptography.

Peter G. Neumann, Principal Scientist in SRI International's Computer Science Laboratory (where he has been since 1971), is concerned with computer systems and networks, trustworthiness with respect to secu-O INSERT BALLOT rity, reliability, survivability, and safety, and O. O. PERATE risks-related issues such as voting-sys-INVALID BALLOT tem integrity (for over 20 years), OPERATE VOID LEVER crypto policy, social implications, and privacy. A com-ELECT CANDIDATES puter professional since 1953, 'ERATE VOID LEVER he was a member of technical O OPERATI staff at Bell Laboratories in Mur-80 10CH ray Hill throughout the 1960s, where LEVER he was heavily involved in the Multics TOLEFT QREMOVE BALLOT system development 1965-1969. His 1995 book, Computer-Related Risks, is REGISTRAR FOR still timely. He is a Fellow of the ACM, REPLACEMENT IEEE, and AAAS. In 1985 he created the online ACM Risks Digest (comp.risks, www. risks.org). He created ACM SIGSOFT's Software Engineering Notes in 1976, edited it for 19 years. During his 10 years at Bell Labs in Murray Hill, New Jersey, in the 1960s, he was heavily involved in the Multics development. He has doctorates from Harvard and Darmstadt, and taught at Darmstadt, Stanford, U.C. Berkeley, and the University of Maryland. See his website at http://www.csl.sri.com/neumann.

11am Monday 6 October 2008 **Schapiro Center Davis Auditorium** For more information visit http://www.cs.columbia.edu/lectures
