IC Technology

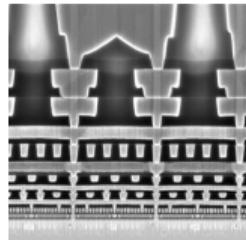

1947: First transistor (Shockley, Bell Labs)

1958: First integrated circuit (Kilby, TI)

1971: First microprocessor (4004: Intel)

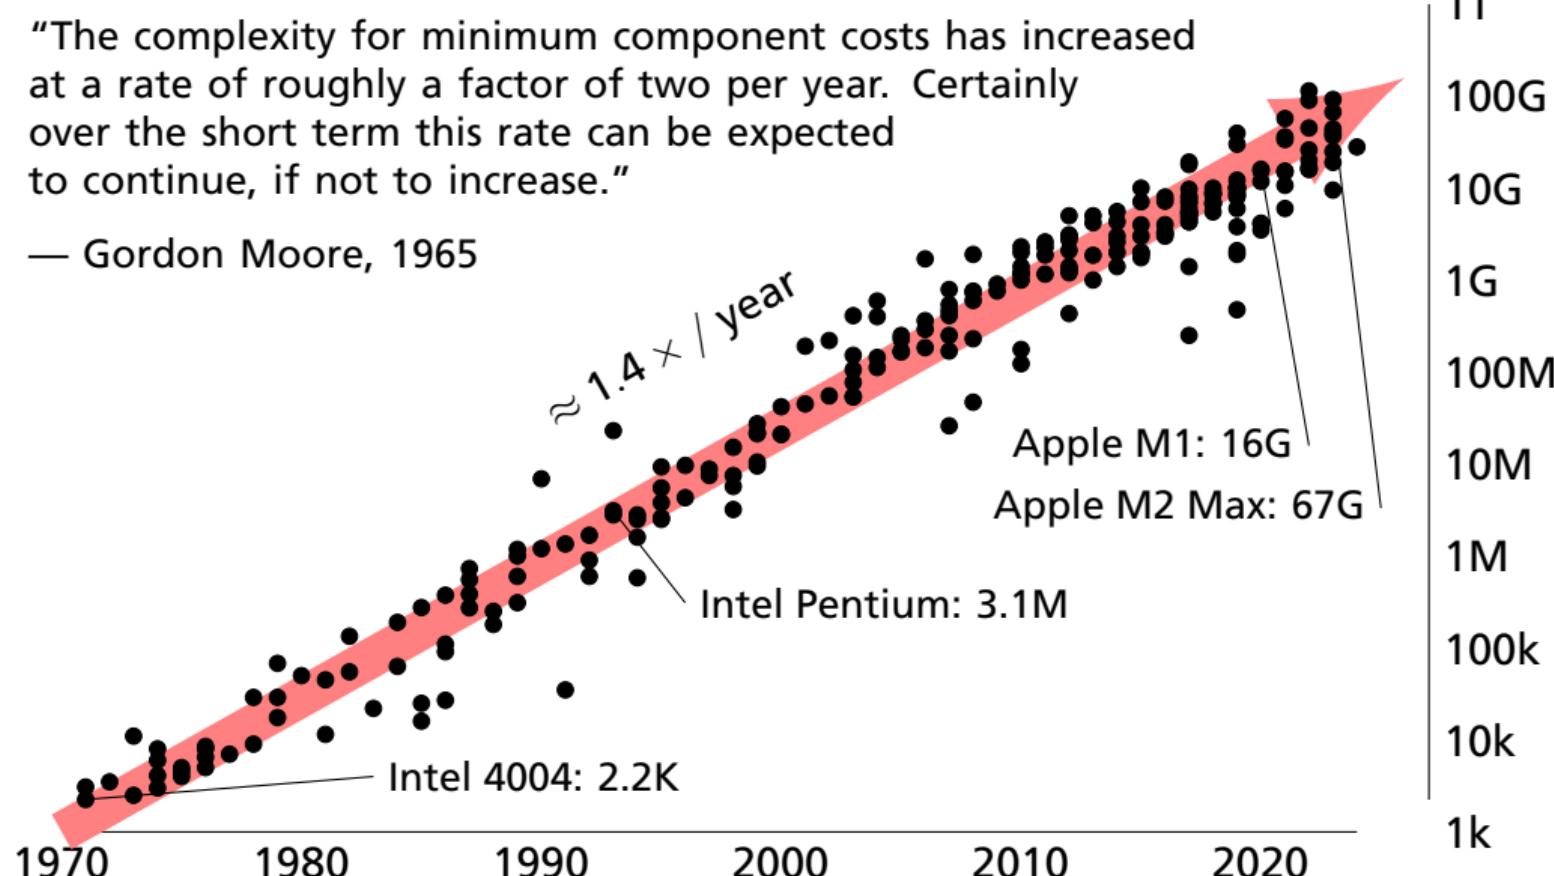

2018: Intel “10 nm” process, 12 layers

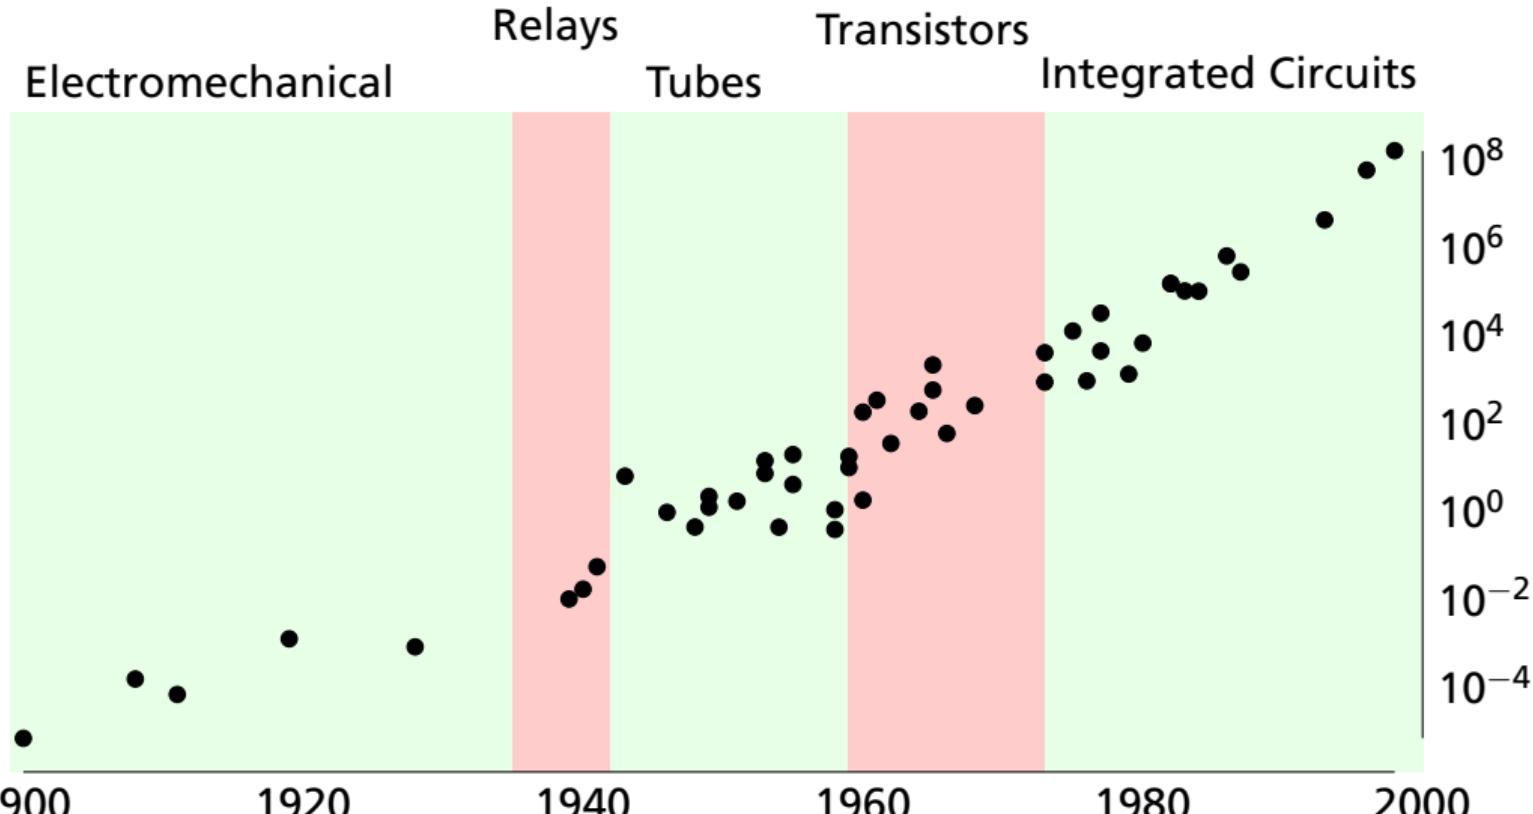

Moore's Law: Transistors per chip

"The complexity for minimum component costs has increased at a rate of roughly a factor of two per year. Certainly over the short term this rate can be expected to continue, if not to increase."

— Gordon Moore, 1965

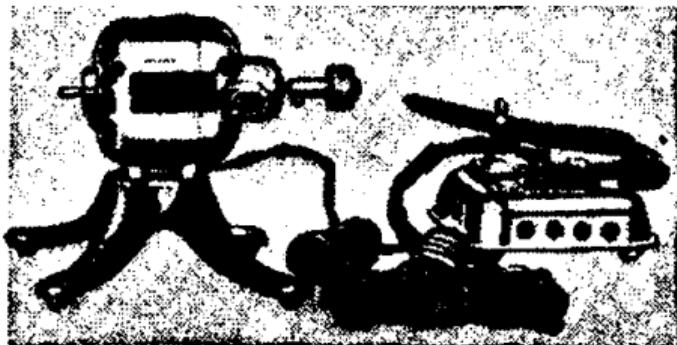

\$1000 Buys You This Many Cycles per Second

Source: Ray Kurzweil, *The Age of Spiritual Machines*

1918 Sears Roebuck Catalog

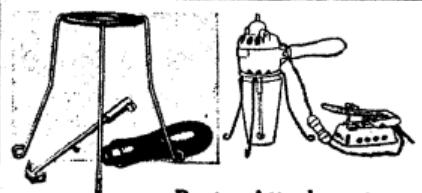

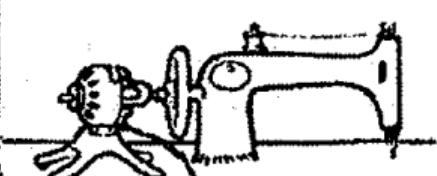

Home Motor.

This motor, as shown above, will operate a sewing machine. Easily attached; makes sewing a pleasure. The many attachments shown on this page may be operated by this motor and help to lighten the burden of the home. Operates on usual city current of 105 to 115 volts. Shipping weight, about 5 pounds.

No. 57P7584 Price, complete, as shown.....

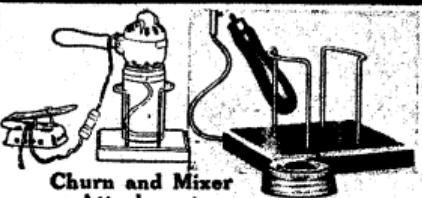

\$8.75

Beater Attachment.

Whips cream and beats eggs, and many other uses will be found for these attachments when used in connection with the Home Motor. Parts include the stand, handle and the beater. Shipping weight, about 14 ounces.

No. 57P7585 Price..... \$1.30

Churn and Mixer Attachment.

Used in connection with the Home Motor, makes a small churn and mixer for which you will find many uses. The attachments include the base, supports, mixer, handle and special cover for jar. Shipping weight, about 1½ pounds.

No. 57P7582 Price..... \$1.30

Fan Attachment.

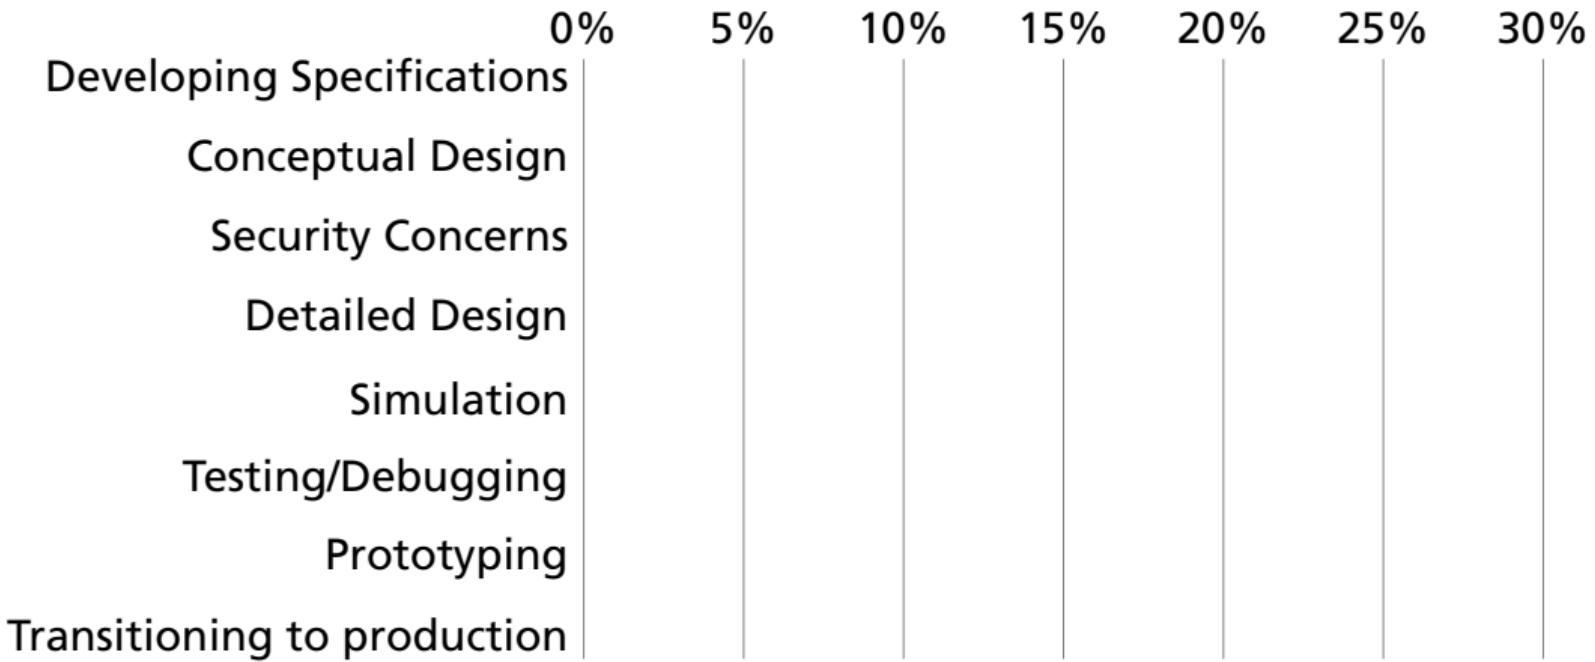

Includes fan and guard which can be quickly attached to Home Motor, and will be a great comfort in hot weather. Shipping weight, about 14 ounces.

No. 57P6215
Price..... \$1.30

About \$150 in 2022 dollars.

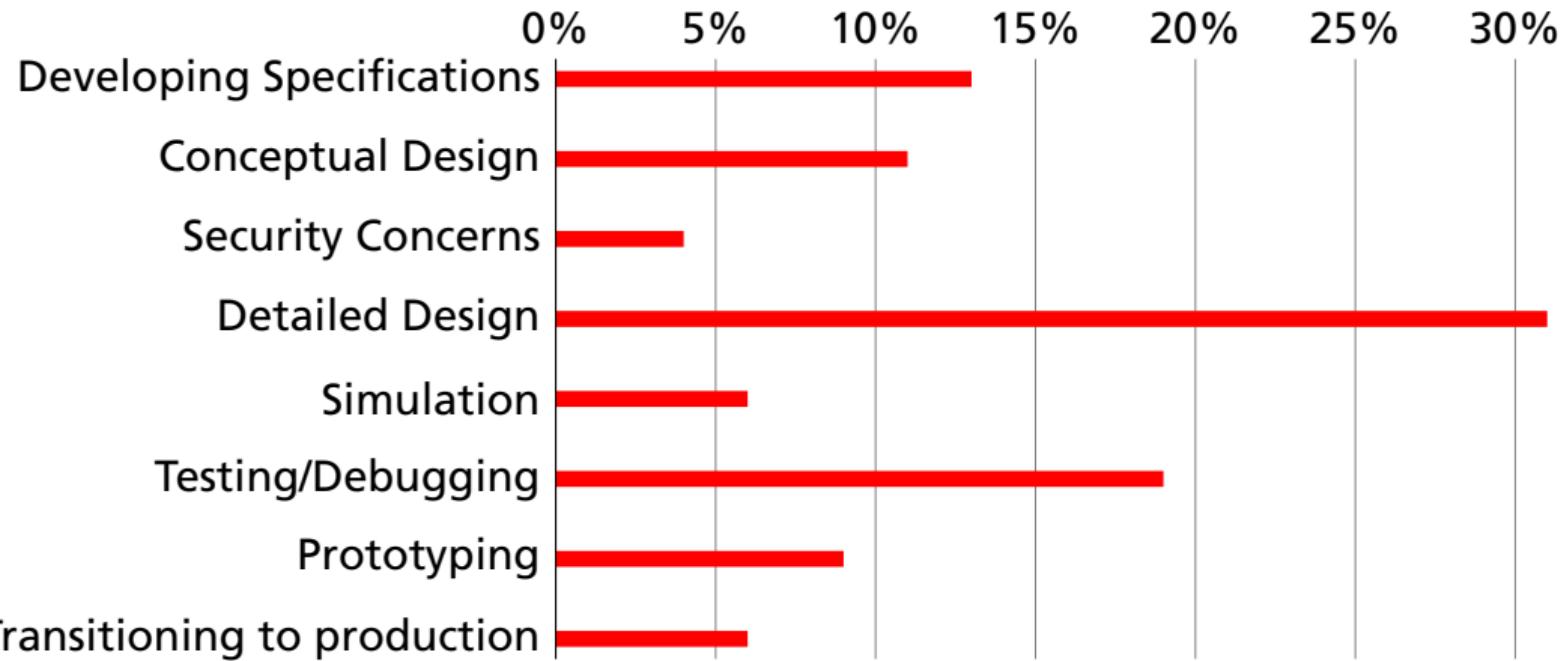

From Donald Norman, *The Invisible Computer*, 1998.

Inside the Cyclone V: Dual ARM processors + FPGA

An Example System

Linux + Custom Hardware

Class Structure

Three Introductory Labs: 2 weeks each

1. Hardware: Test the Collatz Conjecture
 2. Software: A simple Internet chat client
 3. HW + SW: A video bouncing ball
-

The project: **Design-your-own**

Work in groups

Broadly: C + SystemVerilog + peripheral(s)

Broad Project Idea: Video Game

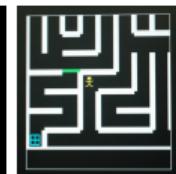

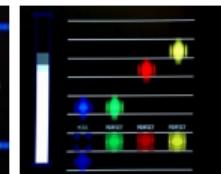

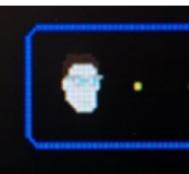

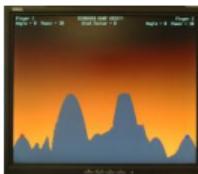

Implement graphics in custom hardware

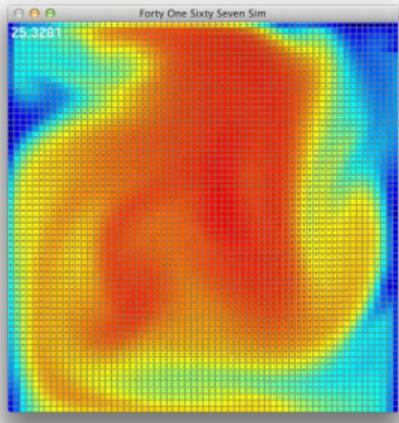

Put game logic in software

Interface with USB HID (Joystick, etc.)

E.g., Pac-man, 2.5D maze game, tank, worms

Broad Project Idea: Computational Accelerator

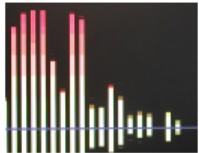

- Pick a computationally intensive algorithm
- Implement its core in custom hardware
- Write software and device drivers that pass data to and from the accelerator
- E.g., Smoke simulator, inverse kinematics for robotics, Bitcoin miner

More Ideas

Digital tone control

Spectrum analyzer

Internet radio

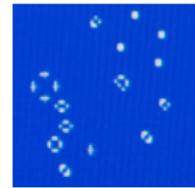

Speech Synthesizer

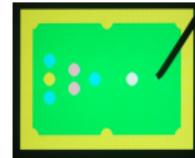

MIDI synthesizer

Accelerated JPEG

Game of Life

Pool game

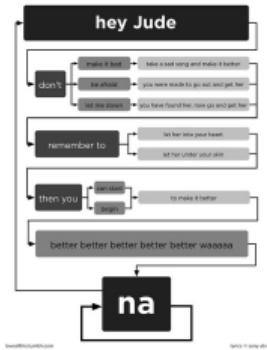

Real-time ray tracer

Where Does This Noise Come From?

Nikon D300: 23.6 mm \times 15.8 mm

12.3 megapixel CMOS sensor

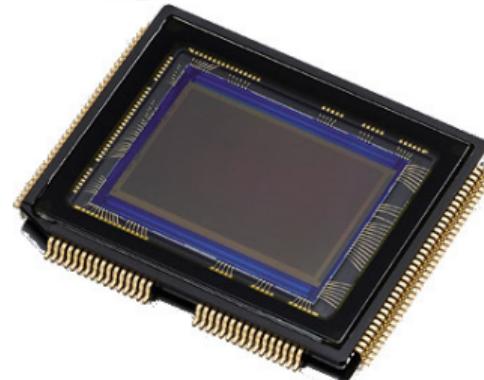

Pixels are 5.5 μm on a side

A/D sampling of 12 bits per pixel measures

ISO:	LO	200	400	800	1600	3200
G	7.1	5.5	2.7	1.3	0.65	0.33
B	5.8	4.6	2.3	1.1	0.55	0.27
R	4.7	4.5	2.2	1.1	0.54	0.26

The units: *electrons per ADU* (digital unit).

Emil Martinec, *A comparison of the Nikon D300 and Canon 40D sensors*, 2007.

The Two Big Challenges

- ▶ Design the algorithm
 - 1. Acquire representative input (sensor) data
 - 2. Conceive of an algorithm
 - 3. Prototype the algorithm using your favorite language
- ▶ Implement the algorithm
 - 1. Choose a hardware/software partition based on performance and resource constraints
 - 2. Develop software and hardware architectures
 - 3. Define interface between software and hardware
 - 4. Implement the hardware and software
 - 5. Test, test, test...
